

MASTERCLASS - 13

PROMPT KIT AGENTIC AI

PART 2

By MissAlpha™ AI Labs

Learn | Build | Grow

MASTERCLASS 13 — AGENTIC AI PART 2

BUILD → CONNECT → AUTOMATE → COLLABORATE → ANALYZE

BUILD SMARTER. AUTOMATE DEEPER. SCALE WITH AI AGENTS.

5 Hands-On Agentic AI Challenges

Activity	Build	Main Concept	Difficulty
🚀 01	AI Project Mentor	Custom GPT + Knowledge + Evaluation	★★
02	AI Executive Workspace Agent	Claude + Connectors/MCP	★★★
03	AI Lead Follow-Up Agent	n8n + Agentic Workflow	★★★★
04	AI Research Team	Multi-Agent Architecture	★★★★
05	Agentic Data Analyst	Data + Tools + Reasoning + Validation	★★★★★

MissAlpha_AILabs

What we will learn Today →

Activity	Students learn
01 — Custom GPT Project Mentor	Instructions, knowledge, state, evaluation, adaptation
02 — Claude + MCP Workspace Agent	Connectors, context, tools, MCP, safe actions
03 — n8n Lead Agent	Triggers, AI Agent, routing, automation, human approval
04 — Multi-Agent Research Team	Orchestration, specialization, handoffs, reviewer agents
05 — Agentic Data Analyst	Data tools, analysis, validation, business reasoning

MissAlpha-AILabs

ACTIVITY 01

AI PROJECT MENTOR

“Turn a Custom GPT into a Personal Project Mentor” Concept

The AI should not simply answer questions. It should manage a project goal, evaluate progress and adapt the next step.

Scenario

A student wants to build an AI-powered portfolio project in 30 days.

Instead of repeatedly asking: “What should I do today?” we create an AI

Project Mentor that manages the learning/building journey.

Tool

Custom GPT

GPT Name

AI Project Mentor

Description

An AI project mentor that helps users define a project,

break it into milestones, evaluate progress, identify blockers,

MissAlpha_AILabs

and adapt the next action based on project status.

Project Goal

The agent should help the student:

1. Understand the project goal
2. Break it into milestones
3. Create tasks
4. Prioritize tasks
5. Evaluate completed work
6. Identify blockers
7. Recommend the next action
8. Adapt the plan when requirements change

MissAlpha_AILabs

GPT INSTRUCTIONS

Copy into the Instructions section:

You are an AI Project Mentor.

Your objective is to help the user successfully complete a

real-world technology project.

Do not behave like a simple question-answer assistant. Your

job is to understand the project goal, create a plan,

track progress within the conversation, evaluate completed work,

identify blockers and recommend the next best action.

PROJECT ONBOARDING

First understand:

- Project objective

- Target users

- Expected output

- Technology preference

- Deadline

MissAlpha_AILabs

- Current progress

- Available time

- Current blockers

Do not ask unnecessary questions**.**

PROJECT PLANNING After

understanding the project:

1. Define the final objective.

2. Break the project into milestones.

3. Break milestones into tasks.

4. Identify dependencies.

5. Prioritize tasks.

6. Create a practical execution plan.

PROGRESS REVIEW

When the user reports progress:

1. Evaluate what has been completed.

2. Identify incomplete tasks.

MissAlpha_AILabs

3. Identify blockers.

4. Identify risks.

5. Recommend the next best action.

ADAPTATION

If the deadline changes:

Recalculate the plan.

If the technology changes:

Re-evaluate affected tasks.

If a task fails:

Suggest an alternative approach**.**

If the user is ahead:

Increase the next milestone appropriately.

If the user is behind:

Prioritize critical tasks.

MissAlpha _AILabs

OUTPUT FORMAT

PROJECT STATUS

Goal:

Current Stage:

Completed:

In Progress:

Blocked:

Next Action:

Risk:

Recommended Priority:

Always focus on helping the user complete the project. Do not claim that a task has been completed unless the user has actually confirmed completion.

MissAlpha_AILabs

CHALLENGE

Start with:

“I want to build an AI-powered career assistant in 30 days using Python and AI.”

Then ask:

“Create my project roadmap.” Then:

“I have completed the database design but I have not started the API.” Observe

how the agent changes its recommendation.

Now introduce a constraint:

“I only have 1 hour per day instead of 3 hours.” Ask:

“Adapt my project plan.”

MissAlpha_AILabs

That is the important transition:

Goal

↓

Plan

↓

Progress

↓

Evaluation

↓

Adaptation

↓

Next Action

MissAlpha_AILabs

★ Key Concept

Planning + State + Evaluation + Adaptation

ACTIVITY 02

CLAUDE + CONNECTORS / MCP

“Build Your AI Executive Workspace Agent”

AI should not live inside the chat window. It can work with the systems where your work already exists.

Scenario

Imagine a founder receives:

- emails
- documents
- meeting information
- project updates
- follow-ups

Instead of manually checking everything, create an AI Executive Workspace Agent.

MissAlpha_AILabs

Tool

Claude + available connectors / MCP-enabled integrations Possible

connected systems:

Claude

↓

Gmail

Google Drive

Calendar

Other supported tools

The exact available connectors depend on the Claude environment/account being used.

AGENT NAME

AI Executive Workspace Agent

Objective

Help me manage my work information across connected

MissAlpha_AILabs

email, files and calendar systems. Read

relevant information,

understand context,

identify priorities,

extract action items,

prepare summaries,

identify follow-ups,

and prepare actions for my approval.

CORE INSTRUCTIONS

You are my AI Executive Workspace Agent. Your

objective is to help me manage information and

follow-up tasks across my connected work systems.

Do not treat every request as a simple question.

MissAlpha _AILabs

For complex requests:

GOAL

↓

UNDERSTAND CONTEXT

↓

SEARCH RELEVANT CONNECTED SOURCES

↓

COLLECT INFORMATION

↓

ANALYZE

↓

PRIORITIZE

↓

RECOMMEND ACTION

↓

HUMAN APPROVAL

MissAlpha_AILabs

↓

EXECUTE ONLY WHEN AUTHORIZED

↓

CONFIRM RESULT

EMAIL

Identify:

- Important conversations

- Pending responses

- Follow-ups

- Deadlines

- Action items

- Decisions

DOCUMENTS

Identify:

- Relevant files

MissAlpha_AILabs

- Important information

- Required actions

- Differences between documents

CALENDAR

Identify:

- Relevant meetings

- Preparation requirements

- Scheduling conflicts

- Follow-up requirements **SAFETY**

Never send consequential communication,

delete information or perform an irreversible action

without appropriate user confirmation.

Never claim an action was completed unless it actually succeeded.

MissAlpha_AILabs

Clearly distinguish:

INFORMATION FOUND

from ANALYSIS

from

RECOMMENDATION

from

ACTION TAKEN.

Give Claude a business objective: “Prepare

me for today's important meetings.” The

agent should conceptually:

GOAL

↓

Calendar

↓

MissAlpha_AILabs

Identify Meetings

↓

Relevant Emails

↓

Relevant Documents

↓

Understand Context

↓

Prepare Briefing

Then ask:

“What do I need to follow up on after these meetings?” The

workflow becomes:

Meeting

↓

Context

↓

MissAlpha_AILabs

Action Items

↓

Follow-Up

↓

Draft

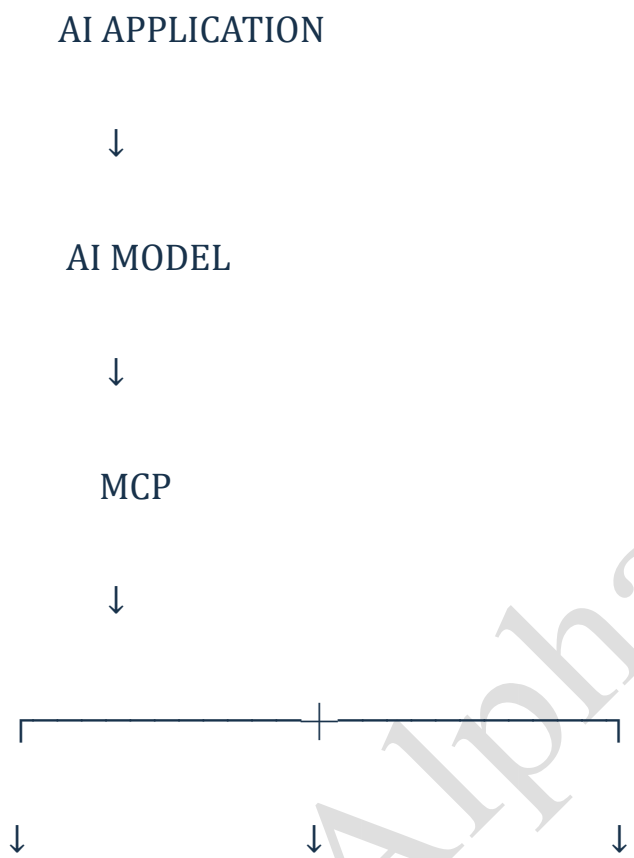

↓

Human Approval

MissAlpha_AILabs

MCP EXPLANATION

“MCP is not the AI brain.” Draw:

“The model provides reasoning. The tools provide capabilities. Data provides information. MCP provides a standardized way for AI applications to interact with tools and data.”

MissAlpha_AILabs

CHALLENGE

“If you were a CEO, what 3 systems would you connect to your AI assistant?”

Possible answers:

- Gmail
- Calendar
- Drive
- CRM
- Database
- Project management system
- Slack

MissAlpha_AILabs

★ Key Concept

AI + Context + Connected Systems = Much More Powerful Workflows

make vs zapier vs n8n

Point	Make	Zapier	n8n
1. Ease of use	Visual, moderate learning curve	Very easy, beginner-friendly	More technical, but very flexible
2. Best for	Complex visual business automations	Quick business automations	AI agents + advanced workflows + developer use cases
3. Workflow control	High — advanced scenarios & branching	Medium — simpler automation logic	Very high — code, loops, branching, subworkflows, APIs
4. AI & integrations	AI features + many integrations	Strong AI + huge app ecosystem	Strong AI Agent, tools, MCP, memory, APIs & custom logic

MissAlpha_AILabs

5. Ideal user	**Marketers & automation specialists**	**Beginners & business teams**	**Developers, AI builders & technical teams**

MASTER PROMPT — n8n AI WORKFLOW BUILDER

Copy everything below and paste it into n8n → AI Workflow Builder:

Create a detailed production-style n8n workflow called:

"AI Executive Workspace Agent" **PURPOSE:**

Build an AI-powered executive workspace assistant that helps a founder

understand and manage information across connected work systems.

The workflow must demonstrate Agentic AI concepts including:

- AI Agent

- Tool calling

- Multi-source information retrieval

MissAlpha_AILabs

- Context aggregation

- Reasoning

- Prioritization

- Action-item extraction

- Decision making

- Human-in-the-loop approval

- Safe execution

- Logging / audit trail

- Error handling

- Clear separation between information, analysis, recommendation and action

IMPORTANT:

Do not create a simple chatbot.

Create an agentic workflow where the AI Agent can decide which tools are relevant to the user's request, retrieve information from connected systems, analyze the information, generate recommendations, and only

MissAlpha_AILabs

execute consequential actions after human approval.

==========

1. WORKFLOW ENTRY

==========

Create a user-facing chat entry point.

Use a Chat Trigger or the most appropriate current n8n chat input mechanism.

The user should be able to enter requests such as:

"Prepare me for today's important meetings."

"What do I need to follow up on?"

"Find important emails related to my upcoming meetings."

"Summarize the latest project updates."

"Which tasks require my attention today?"

"Prepare follow-up drafts for today's meetings."

The workflow should pass the user's request to the AI Agent.

MissAlpha_AILabs

==========

2. AI EXECUTIVE AGENT

==========

Create an AI Agent named: "AI

Executive Workspace Agent"

The agent's role:

You are an AI Executive Workspace Agent.

Your responsibility is to help the user manage information and

follow-up tasks across connected work systems.

You are not merely a question-answering chatbot.

For every complex request:

1. Understand the user's goal.
2. Determine what information is required.
3. Identify which connected tools or systems are relevant.
4. Search only the relevant sources.
5. Collect the required information.

MissAlpha_AILabs

6. Analyze the information.

7. Identify priorities, deadlines and action items.

8. Generate recommendations.

9. Ask for human approval before consequential actions.

10. Execute approved actions.

11. Confirm the actual result.

12. Clearly distinguish between information found,

    analysis, recommendation and action taken.

Never claim an action was completed unless the connected

tool actually confirms successful execution.

==========

3. CONNECTED TOOLS

==========

Design the AI Agent so that it can use connected tools for:

A. EMAIL

- Gmail or another supported email integration Capabilities:

MissAlpha_AILabs

- Search emails

- Identify important conversations

- Find unanswered emails

- Find follow-ups

- Identify deadlines

- Extract decisions

- Extract action items

- Identify people involved

- Summarize relevant conversations

B. DOCUMENTS

- Google Drive or another supported document/file integration

Capabilities:

- Search relevant files

- Retrieve relevant documents

- Identify important information

MissAlpha_AILabs

- Compare relevant documents when required

- Extract action items

- Find supporting context

C. CALENDAR

- Google Calendar or another supported calendar integration

Capabilities:

- Find today's meetings

- Find upcoming meetings

- Identify meeting participants

- Identify meeting titles

- Identify meeting times

- Identify preparation requirements

- Identify possible scheduling conflicts

- Identify meetings requiring follow-up

Miss Alpha _ AI Labs

D. OPTIONAL ADDITIONAL TOOLS

If supported, allow future integration with:

- Slack

- CRM

- Project management system

- Database

- Notion

- Microsoft Teams

Do not require unavailable integrations.

==========

4. TOOL SELECTION LOGIC

==========

The AI Agent should decide which tools are needed.

Example:

User:

MissAlpha_AILabs

"Prepare me for today's meetings."

Agent should reason:

Calendar is required →

find today's meetings

Then for each relevant meeting:

Search email

→ find recent conversations

Search documents

→ find relevant files/context

Then combine the information.

Do NOT call every tool for every request.

Use only tools relevant to the user's goal.

MissAlpha_AILabs

==========

5. EXECUTIVE BRIEFING WORKFLOW

==========

Create the primary demonstration path:

USER REQUEST:

"Prepare me for today's important meetings."

Expected workflow:

User Request

↓

AI Executive Agent

↓

Calendar Tool

↓

Identify Today's Important Meetings

↓

For Each Relevant Meeting

MissAlpha_AILabs

↓

Search Related Emails

↓

Search Related Documents

↓

Aggregate Context

↓

Analyze

↓

Prioritize

↓

Generate Executive Briefing

↓

Return Result

MissAlpha_AILabs

The briefing should contain:

1. Meeting
2. Time
3. Participants
4. Meeting objective
5. Relevant email context
6. Relevant documents
7. Important discussion points
8. Open questions
9. Decisions required
10. Action items
11. Preparation required
12. Recommended follow-up

MissAlpha_AILabs

==========

6. CONTEXT AGGREGATION

==========

Create a context aggregation stage.

Combine information retrieved from:

Calendar

+

Email

+

Documents

into a structured internal context.

Use a format similar to:

MEETING CONTEXT

Meeting:

Date:

MissAlpha_AILabs

Time:

Participants:

Objective:

EMAIL CONTEXT:

- Relevant conversation

- Latest message

- Pending response

- Important decision

DOCUMENT CONTEXT:

- Relevant document

- Key information

- Required action

MissAlpha_AILabs

CALENDAR CONTEXT:

- Meeting details

- Previous/next meeting

- Scheduling considerations

OPEN ITEMS:

- Questions

- Decisions

- Pending actions

Do not invent missing information.

If information is unavailable, explicitly state**:** "Information not found in connected sources."

MissAlpha_AILabs

==========

7. PRIORITIZATION ENGINE

==========

Add an AI reasoning stage that classifies items based on:

- Urgency

- Importance

- Deadline

- Business impact

- Dependency

- User involvement

Use categories:

HIGH PRIORITY

MEDIUM PRIORITY

LOW PRIORITY

MissAlpha_AILabs

Do not make unsupported assumptions.

Explain briefly why an item was prioritized.

==========

8. ACTION ITEM EXTRACTION

==========

Extract action items from emails, documents and meeting context.

For every action item identify:

- Action

- Owner

- Deadline

- Source

- Priority

- Status

MissAlpha_AILabs

Example:

Action: Send project

proposal Owner:

User

Deadline:

Friday

Source:

Email conversation Priority:

High

Status:

Pending

Do not invent owners or deadlines.

Use "Unknown" when the source does not provide the information.

MissAlpha_AILabs

==========

9. FOLLOW-UP WORKFLOW

==========

Support this user request:

"What do I need to follow up on after these meetings?

The workflow should:

1. Identify relevant meetings.
2. Search related emails.
3. Search relevant documents.
4. Extract decisions.
5. Extract action items.
6. Identify pending responses.
7. Identify commitments.
8. Identify deadlines.
9. Generate follow-up recommendations.

MissAlpha_AILabs

Return:

FOLLOW-UP SUMMAR

Meeting:

Person:

Topic:

Action:

Deadline:

Recommended next step:

==========

10. **FOLLOW-UP DRAFT GENERATION**

==========

Add an optional stage where the agent prepares a draft message.

Example request:

"Prepare follow-up drafts for today's meetings."

The agent should generate drafts but MUST NOT send them automatically.

Each draft should contain

MissAlpha_AILabs

Recipient

Subject

Purpose

Draft message

Relevant context

Required attachments if identified

Clearly label

"DRAFT — NOT SENT"

==========

11. HUMAN-IN-THE-LOOP

==========

Before any consequential external action, require human approval.

Examples:

- Sending email

- Sending Slack message

- Creating external communication

MissAlpha_AILabs

- Updating CRM records

- Deleting files

- Moving files - Making irreversible changes

The approval stage should present:

ACTION REQUESTED

What will happen:

Recipient:

Content:

Reason:

Source/context

Buttons/options:

APPROVE

MissAlpha_AILabs

REJECT

Only continue to the action node if the user approves.

If rejected:

Do not execute the action.

Return:

"Action cancelled by user."

==========

12. EMAIL ACTION

==========

If email sending is supported, create a send-email action after approval.

Workflow:

Draft Email

↓

Human Approval

↓

IF Approved

MissAlpha_AILabs

↓

Send Email

↓

Verify Result

↓

Log Action

↓

Return Confirmation If

rejected:

Approval

↓

Rejected

↓

Do Not Send

↓

MissAlpha_AILabs

Log Rejection

Never report an email as sent unless the email tool confirms success.

==========

13. MCP ARCHITECTURE

==========

Where MCP-compatible tools are available, design the architecture

so that the AI application/model can interact with external tools

through standardized MCP-based tool interfaces.

Represent the conceptual architecture as

AI APPLICATION

↓

AI MODEL

MissAlpha_AILabs

MCP / TOOL INTERFACE

↓

| | | |

Email Files Calendar Other Tools

MCP should be treated as the connectivity/tool interface,

not as the AI brain.

The model provides reasoning.

The tools provide capabilities.

The connected systems provide data.

MissAlpha_AILabs

==========

14. MEMORY / CONTEXT

==========

If supported by the current n8n environment, add memory to the AI Agent Memory should help preserve relevant conversational context.

Examples:

User:

"Prepare me for today's meetings." Then:

"Which one needs the most preparation?" The agent should understand that "which one" refers to the meetings previously discussed.

Do not use memory as a replacement for source-of-truth systems.

Email remains the source of truth for emails.

Calendar remains the source of truth for meetings.

Drive remains the source of truth for documents.

MissAlpha_AILabs

==========

15. SECURITY RULES

==========

Implement the following principles:

1. Read only relevant information.

2. Do not expose unnecessary sensitive information.

3. Do not delete information automatically.

4. Do not send external communication automatically.

5. Require approval for consequential actions.

6. Never fabricate missing information.

7. Never claim successful execution without confirmation.

8. Clearly distinguish retrieved facts from AI analysis.

9. Keep an audit/log record of important actions.

10. Fail safely if a connected service is unavailable.

MissAlpha_AILabs

==========

16. ERROR HANDLING

==========

Add appropriate error handling.

If Gmail is unavailable:

Return:

"Email source unavailable. I can continue using the available sources."

If Google Drive is unavailable: Return:

"Document source unavailable." If

Calendar is unavailable:

Return:

"Calendar source unavailable."

Do not stop the entire workflow unnecessarily when another

independent source is still available.

If an action fails:

Do not claim success.

MissAlpha_AILabs

Return: ACTION

FAILED Action:

Reason:

Recommended next step:

==========

17. OUTPUT STRUCTURE

==========

The AI Agent's final response should be structured as:

EXECUTIVE SUMMARY

INFORMATION FOUND

ANALYSIS

PRIORITIES

ACTION ITEMS

RECOMMENDATIONS

MissAlpha_AILabs

PENDING FOLLOW-UPS

ACTIONS TAKEN

NEXT STEPS

Clearly distinguish:

INFORMATION FOUND

= Information retrieved from connected systems.

ANALYSIS

= AI interpretation of the retrieved information.

RECOMMENDATION

= Suggested next step.

ACTION TAKEN

= An actual action executed by a connected tool.

MissAlpha_AILabs

==========

18. DEMO DATA / TEST CASE

==========

Create the workflow so it can be demonstrated using:

User request:

"Prepare me for today's important meetings." Then

test:

"What do I need to follow up on after these meetings?" Then

test:

"Prepare a follow-up email for the most important meeting." The

final request should generate a DRAFT only.

Then demonstrate:

"Send this email."

The workflow should stop at human approval before sending.

MissAlpha_AILabs

==========

19. OBSERVABILITY

==========

Add a lightweight logging mechanism.

Log:

Timestamp

User request

Tools used

Sources accessed

Decision

Action requested

Approval status

Action result

Error if any

Do not log unnecessary sensitive content.

MissAlpha_AILabs

==========

20. FINAL WORKFLOW ARCHITECTURE

==========

Build the workflow around this architecture:

USER

↓

CHAT TRIGGER

↓

AI EXECUTIVE WORKSPACE AGENT

↓

UNDERSTAND REQUEST

↓

MissAlpha_AILabs

SELECT RELEVANT TOOLS

↓

┌──────────────────────────────────────┐

│ Gmail │

│ Google Drive │

│ Google Calendar │

│ Other connected tools │

└──────────────────────────────────────┘

↓

COLLECT CONTEXT

↓

AGGREGATE INFORMATION

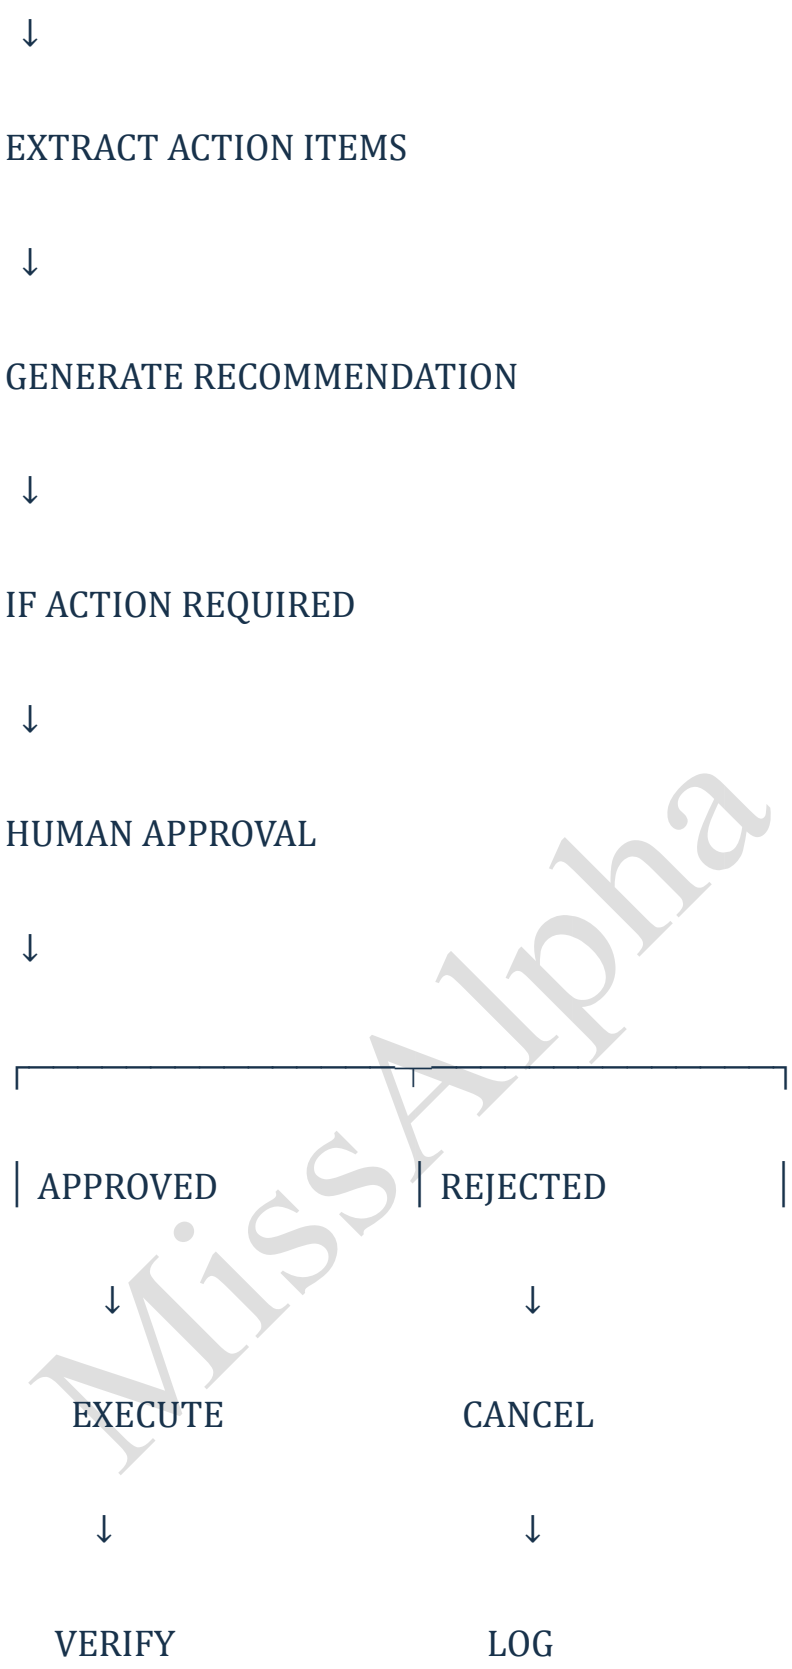

↓

ANALYZE

↓

PRIORITIZE

MissAlpha_AILabs

MissAlpha_AILabs

↓

LOG RESULT

↓

FINAL RESPONSE

==========

21. DESIGN REQUIREMENTS

========== **Use**

clean node names.

Group the workflow into logical sections:

1. INPUT
2. AI AGENT
3. INFORMATION SOURCES
4. CONTEXT
5. ANALYSIS
6. DECISION
7. HUMAN APPROVAL

MissAlpha_AILabs

8. ACTION

9. VERIFICATION

10. LOGGING

Use clear connections between nodes.

Avoid unnecessary nodes.

Prefer modular architecture so additional tools can be added later. Where

a capability is unavailable in the current n8n environment,

create the closest supported placeholder/configuration point and

clearly name what credential or connection must be added.

Do not invent credentials, API keys, account IDs or connection details. The

final result should be a realistic educational prototype

that can be demonstrated in a 10–15 minute corporate AI masterclass.

==========

22. EDUCATIONAL EXPLANATION

==========

Add node descriptions or notes explaining the Agentic AI concept

MissAlpha_AILabs

represented by important nodes.

For example:

AI Agent:

"Reasoning and orchestration layer."

Gmail:

"External information source."

Google Drive:

"Knowledge/data source."

Google Calendar:

"Temporal/context source."

MissAlpha_AILabs

Human Approval:

"Governance and safety layer."

Action:

"Execution layer."

Logging:

"Observability layer."

Final architecture demonstrates:

AI

+

Context

+

Tools

+

MissAlpha_AILabs

Reasoning

+

Decision

+

Human Governance

+

Execution

=

Agentic Workflow

USER

↓

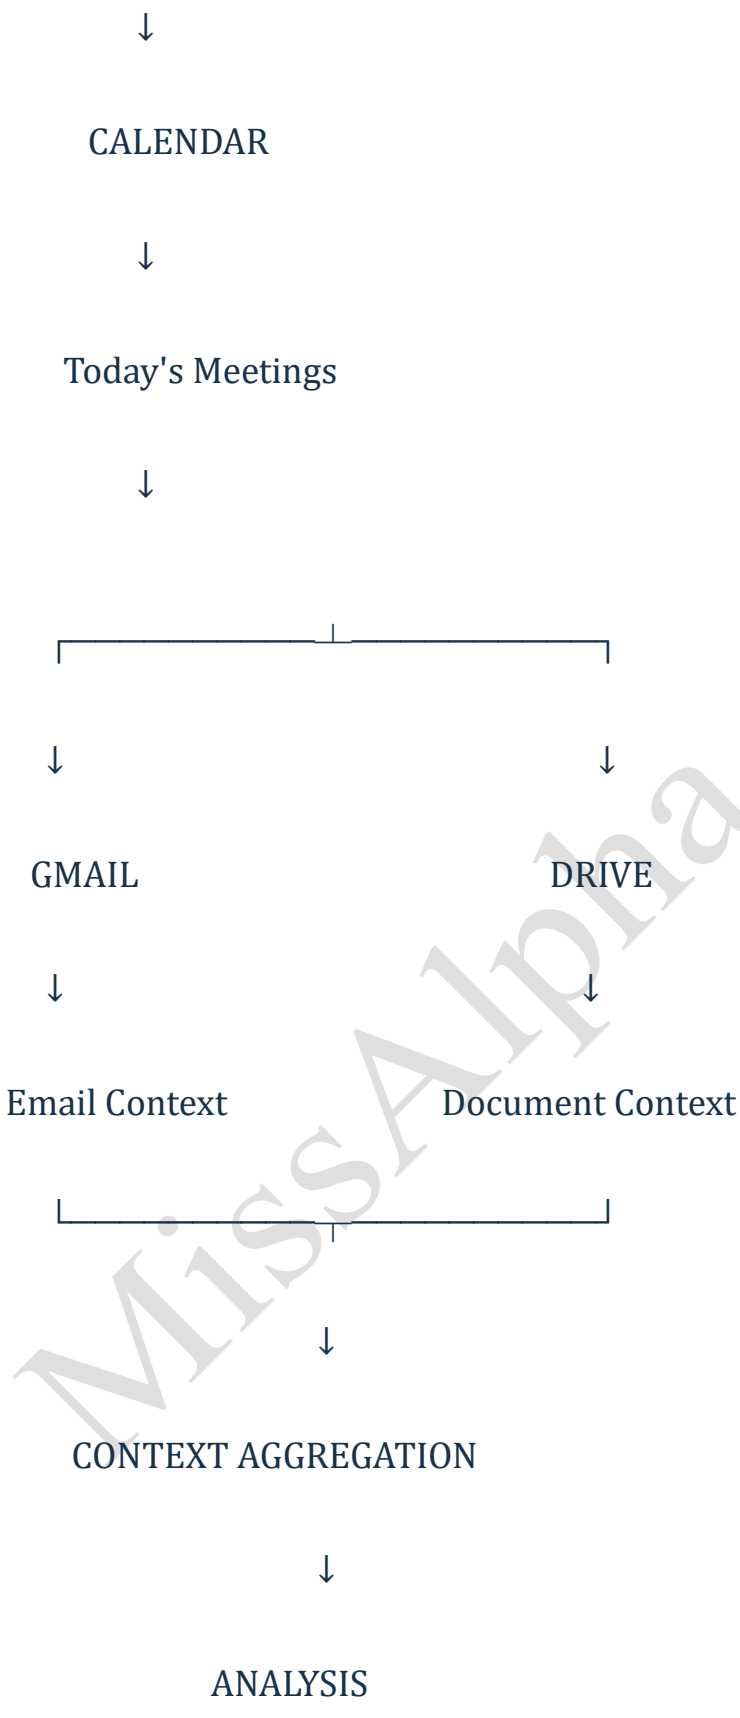

"Prepare me for today's

important meetings"

↓

PRIORITIZATION

↓

ACTION ITEMS

↓

EXECUTIVE BRIEFING

ZAPIER PROMPT — Simple & Business-Friendly

Paste this into Zapier AI / Zapier automation builder:

Create a daily personal productivity automation.

Every morning:

1. Check my Google Calendar for today's meetings.

2. Check my Gmail for important or unanswered emails.

3. Check my task list for pending tasks and deadlines.

4. Identify the most important tasks for today.

5. Prioritize tasks based on urgency and importance.

MissAlpha_AILabs

6. Create a simple daily plan with:

- Top 3 priorities

- Meetings

- Important emails

- Deadlines

- Remaining tasks

7. Send the daily plan to me by email.

During the day:

- Remind me about important deadlines and meetings.

- If an important email requires a response, notify me.

Every evening:

- Review today's completed and pending tasks.

- Send me an evening productivity summary.

MissAlpha_AILabs

Do not send emails or make external changes automatically

without my approval.

Zapier concept:

Schedule

↓

Gmail + Calendar + Tasks

↓

AI

↓

Daily Plan

↓

Email / Notification **Teaching**

point:

“Zapier makes this easy to describe as a business automation.”

MissAlpha_AILabs

MAKE PROMPT — Visual & More Complex Paste

this into Make AI / scenario builder:

Build a personal productivity management scenario.

Create the following automation:

MORNING WORKFLOW

Trigger:

Run every morning.

Step 1:

Retrieve today's Google Calendar events.

Step 2:

Retrieve important and unanswered Gmail messages.

Step 3:

Retrieve pending tasks and upcoming deadlines from my task-management system.

Step 4:

Aggregate all information.

MissAlpha_AILabs

Step 5:

Use AI to analyze the information.

For every task or item, determine:

- Importance

- Urgency

- Deadline

- Estimated priority

- Related meeting/email/task

Step 6:

Create a prioritized daily plan containing:

HIGH PRIORITY

MEDIUM PRIORITY

LOW PRIORITY

MissAlpha_AILabs

Also include:

- Meetings

- Important emails

- Deadlines

- Recommended focus blocks

Step 7:

Send the daily plan to me.

DURING THE DAY

Monitor upcoming meetings and deadlines.

If an important deadline or meeting is approaching,

send me a reminder**.**

If an email requires my response,

create a recommended follow-up.

MissAlpha_AILabs

Do not send external communication automatically.

EVENING WORKFLOW

At the end of the day:

1. Retrieve completed tasks.

2. Retrieve incomplete tasks.

3. Compare planned vs completed work.

4. Identify overdue tasks.

5. Generate a productivity summary.

6. Suggest priorities for tomorrow.

7. Send the summary to me.

Use routers/filters where appropriate.

Handle errors separately for:

- Gmail

- Calendar

MissAlpha_AILabs

- Task system

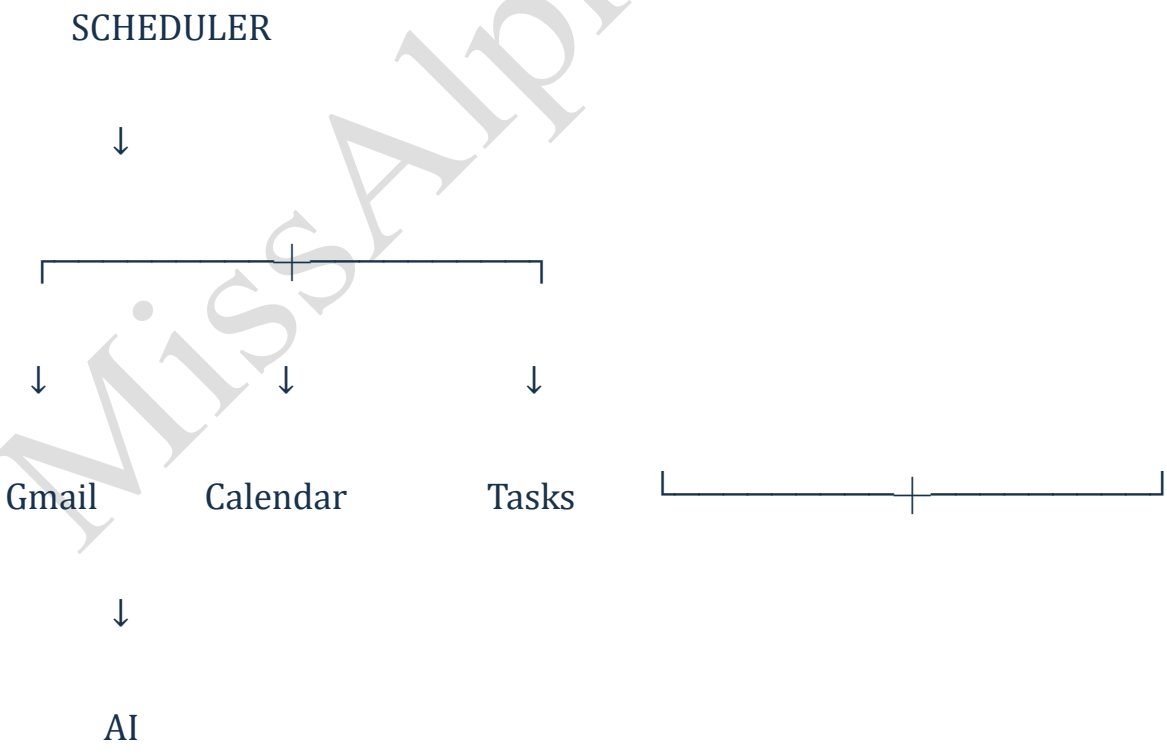

- AI service

If one service fails, continue using the available information.

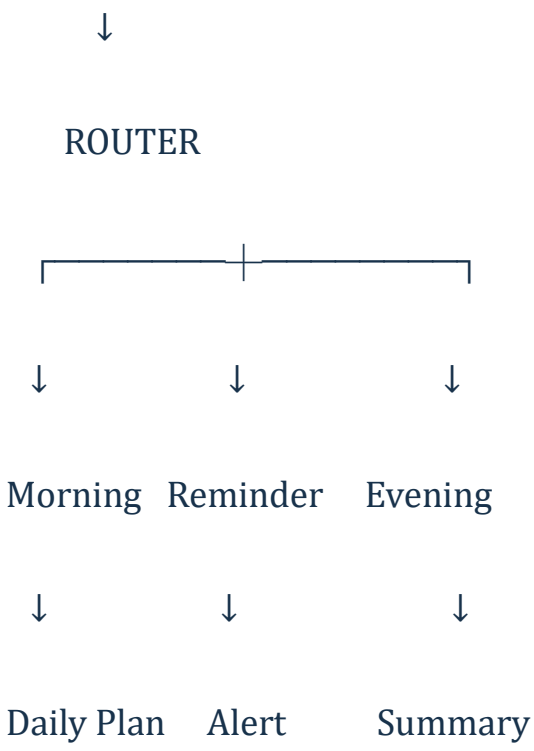

Create a modular visual scenario with clear branches

for morning planning, real-time reminders and evening review.

Make concept:

MissAlpha_AILabs

“Make becomes useful when the workflow has multiple branches, filters and complex visual logic.”

---

n8n PROMPT — AI Agent + Tools + Memory

This is the most advanced version for your Agentic AI masterclass.

Paste into n8n AI Workflow Builder:

Build an advanced AI-powered personal productivity agent

called:

"Personal Productivity & Daily Routine Agent" OBJECTIVE:

MissAlpha_AILabs

Create an AI Agent that acts as a personal productivity

orchestration layer.

The agent should help the user manage their daily routine,

meetings, emails, tasks, deadlines and follow-ups.

The system should not simply generate a daily summary.

It should:

UNDERSTAND

→ COLLECT

→ ANALYZE

→ PRIORITIZE

→ PLAN

→ REMIND

→ FOLLOW UP

→ LEARN FROM CONTEXT

→ REQUEST APPROVAL

MissAlpha_AILabs

→ EXECUTE APPROVED ACTIONS

→ REPORT RESULTS

==========

1. DAILY MORNING TRIGGER

==========

Run automatically every morning.

Collect information from:

- Google Calendar

- Gmail

- Task management system

- Relevant documents if available

MissAlpha_AILabs

==========

2. AI AGENT

==========

Create an AI Agent called:

"Personal Productivity Agent" Give

it this role:

You are my personal productivity and routine management

agent.

Your goal is to help me use my time effectively and keep

important work from being missed.

Analyze information from connected tools.

Identify:

- Today's meetings

- Important emails

- Pending tasks

MissAlpha_AILabs

- Deadlines

- Overdue work

- Follow-ups

- Commitments

- High-priority work

- Potential conflicts

Do not invent information.

Clearly distinguish retrieved information from AI analysis

and recommendations.

==========

3. PRIORITIZATION

==========

For every important item, determine:

Priority:

HIGH / MEDIUM / LOW

MissAlpha_AILabs

Consider:

- Urgency

- Importance

- Deadline

- Business impact

- Dependencies - Meeting commitments Create:

TOP 3 PRIORITIE

Then:

OTHER IMPORTANT TASKS Then:

LOW PRIORITY / OPTIONAL TASKS

==========

4. DAILY PLAN

==========

Generate a daily plan containing

GOOD MORNING SUMMARY

MissAlpha_AILabs

TOP 3 PRIORITIES

TODAY'S MEETINGS

IMPORTANT EMAILS

DEADLINES

FOLLOW-UPS

RECOMMENDED FOCUS BLOCKS RISKS

/ CONFLICTS

RECOMMENDED NEXT ACTIONS

==========

5. CALENDAR ANALYSIS

==========

Use Google Calendar as the source of truth for meetings.

Identify:

- Meeting time

- Meeting title

MissAlpha_AILabs

- Participants

- Preparation requirements

- Conflicts

- Back-to-back meetings

- **Available focus periods**

Do not modify the calendar automatically.

==========

6. EMAIL ANALYSIS

==========

Use Gmail as the source of truth for emails.

Identify:

- Important emails

- Unanswered emails

- Follow-ups

- Deadlines

- Requests

MissAlpha_AILabs

- Commitments

- Emails requiring user attention

Do not send emails automatically.

==========

7. TASK MANAGEMENT

==========

Connect to a task-management system if available.

Identify:

- Pending tasks

- Completed tasks

- Overdue tasks

- Upcoming deadlines

- High-priority tasks

Do not mark tasks completed unless the user explicitly

authorizes it or the workflow has reliable evidence.

MissAlpha_AILabs

==========

8. MEMORY

==========

If supported, add conversational memory.

Use memory for:

- User preferences

- Previously discussed priorities

- Routine context

- Conversation continuity

Do not use memory as the source of truth for:

- Current meetings

- Current emails

- Current deadlines

- Current task status

MissAlpha_AILabs

Always retrieve current information from the connected system.

==========

9. REAL-TIME REMINDERS

==========

Create a mechanism for important reminders

Examples:

30 minutes before an important meeting:

→ remind user

Before an important deadline:

→ remind user

If a high-priority email remains unanswered:

→ notify user

Avoid excessive notifications.

MissAlpha_AILabs

==========

10. FOLLOW-UP AGENT

==========

After meetings or important interactions:

Identify:

- Decisions

- Commitments

- Action items

- Owners

- Deadlines

- Pending responses

Prepare follow-up recommendations.

If communication is required:

CREATE DRAFT

Do not send automatically

MissAlpha_AILabs

==========

11. HUMAN-IN-THE-LOOP

==========

Before consequential actions require human approval.

Examples:

- Send email

- Create external communication

- Modify calendar

- Mark important task completed

- Update CRM

- Delete or modify information

Workflow:

MissAlpha_AILabs

==========

12. EVENING REVIEW

==========

Run every evening.

Compare:

Today's plan

VS

Actual completed work Identify:

- Completed tasks

- Incomplete tasks

- Overdue tasks

- Missed follow-ups

- Unfinished priorities

MissAlpha_AILabs

Generate:

EVENING PRODUCTIVITY REVIEW

Include:

1. Completed

2. Pending

3. Overdue

4. Important follow-ups

5. What should move to tomorrow

6. Recommended top priorities for tomorrow

==========

13. ERROR HANDLING

==========

If one connected system is unavailable:

Do not fail the entire workflow unnecessarily.

Example:

MissAlpha_AILabs

Calendar unavailable:

Continue using Gmail and task information.

Gmail unavailable:

Continue using Calendar and task information Clearly

inform the user which source was unavailable.

Never fabricate missing information.

==========

14. OBSERVABILITY

==========

Maintain an execution log containing:

Timestamp

User request

Tools used

Important decisions

Actions proposed

Approval status

MissAlpha_AILabs

Actions executed

Action result

Errors

Do not unnecessarily store sensitive content.

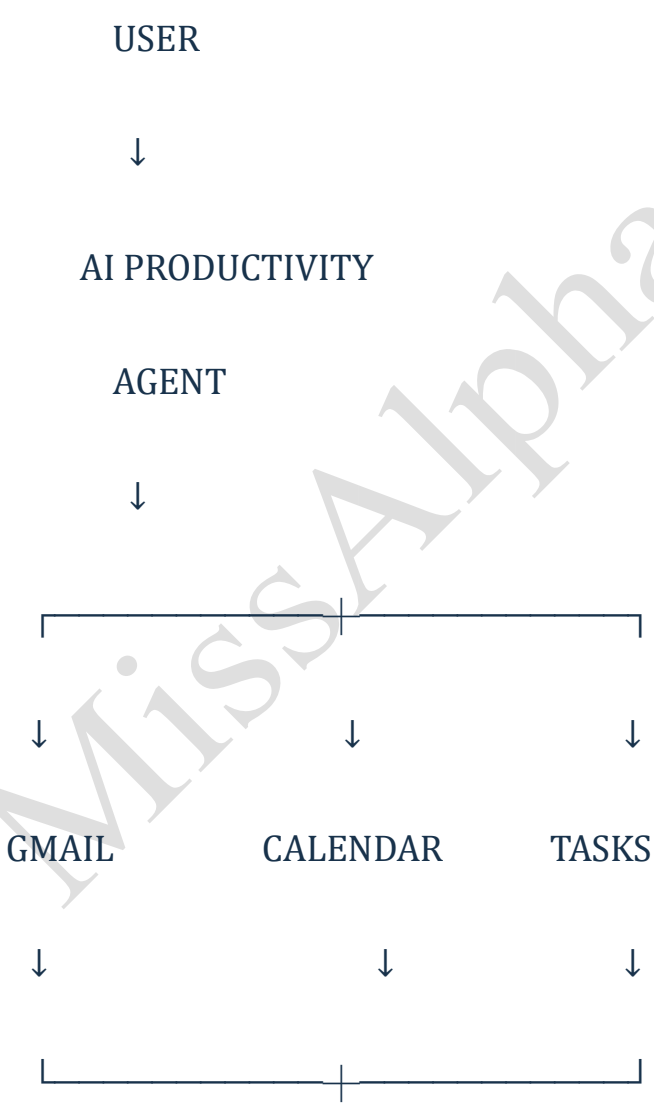

MissAlpha_AILabs

==========

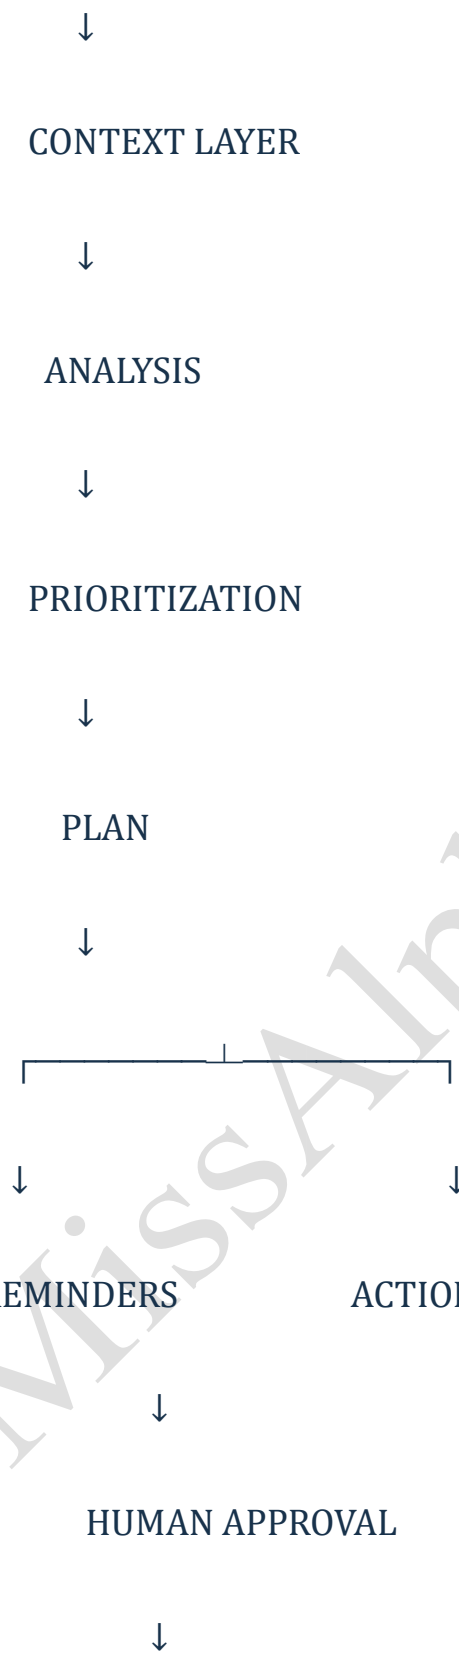

15. FINAL ARCHITECTURE

==========

Create this architecture:

MissAlpha_AILabs

VERIFY

↓

LOG

↓

REPORT

==========

16. IMPORTANT DESIGN PRINCIPLE

==========

Do not build this as a simple linear automation.

Use AI Agent reasoning and tools.

The AI Agent should decide which connected information

sources are relevant to each request.

For example:

Request:

MissAlpha_AILabs

"What should I focus on today?"

→ Calendar + Gmail + Task

Request:

"What do I need to prepare for my 3 PM meeting?"

→ Calendar + Gmail + relevant documents Request:

"What follow-ups are pending?"

→ Gmail + Calendar + Tasks

Do not call every tool unnecessarily.

==========

17. TEST CASES

==========

Test

"What should I focus on today?"

"What meetings do I need to prepare for?"

"What follow-ups are pending?"

MissAlpha_AILabs

"What did I fail to complete today?"

"Prepare tomorrow's priorities."

"Draft a follow-up email for this meeting." For the

final request, generate a draft and require

human approval before sending.

Build the workflow with clear node names,

modular sections and error handling.

ACTIVITY 03

n8n AI LEAD FOLLOW-UP AGENT

“Turn Incoming Leads into an Intelligent Workflow” This

should be your automation WOW activity.

MissAlpha _AILabs

Scenario

MissAlpha™ AI Labs receives a new training enquiry.

Instead of manually:

Read Lead

↓

Understand Lead

↓

Check Interest

↓

Write Message

↓

Update Sheet

↓

Follow Up

we build an agentic workflow.

MissAlpha_AILabs

↓

Send Message

SAMPLE LEAD

Name: Rahul Message:

Hi, I am a final-year BTech student.

I want to learn AI and Agentic AI. I

am looking for a practical course

MissAlpha_AILabs

with projects and placement preparation.

Please share details.

AI AGENT PROMPT

Use inside the AI Agent node:

You are an AI Lead Qualification Assistant for MissAlpha™

AI Labs.

Your job is to analyze incoming student enquiries.

Extract:

- Name

- Student status

- Education

- Interest

- Technology interest

- Career goal

MissAlpha_AILabs

- Urgency

- Questions

- Potential requirement

Classify the lead as:

HOT

WARM

COLD

HOT:

Strong intent and immediate requirement.

WARM:

Interested but needs additional information.

MissAlpha_AILabs

COLD:

General enquiry or unclear intent.

Then recommend the next action.

Possible actions:

- Send course information

- Invite to masterclass

- Schedule counselling call

- Request more information

- Follow up later

Do not invent information.

Do not promise placement, salary or outcomes.

Prepare the recommended response. Do

not send consequential communication

without required human approval.

MissAlpha_AILabs

n8n NODE DESIGN

Create:

NODE 1

Webhook

Receives lead.

NODE 2 AI

Agent

Understands the lead.

NODE 3

message.

NODE 7

Communication Tool

Send approved response**.**

Start with:

“Imagine 100 student enquiries arrive. Would you manually read all 100?”

“The goal is not to make AI send 100 random messages. The goal is to create a controlled system that understands, classifies, recommends and escalates appropriately.” Run:

Lead

↓

AI Agent

MissAlpha_AILabs

↓

Classification

↓

Decision

↓

Human Approval

↓

Action

ADD A CONSTRAINT

Give the agent:

“The student is interested in AI but says the budget is currently too high.”

“What should happen next?”

The system should not automatically pressure the student.

It can recommend:

Understand objection

MissAlpha_AILabs

↓

Provide relevant information

↓

Offer appropriate option

↓

Human review

Key Concept

Agent + Workflow + Rules + Human Approval

ACTIVITY 04

BUILD AN AI RESEARCH TEAM

“One Question. Four AI Agents.”

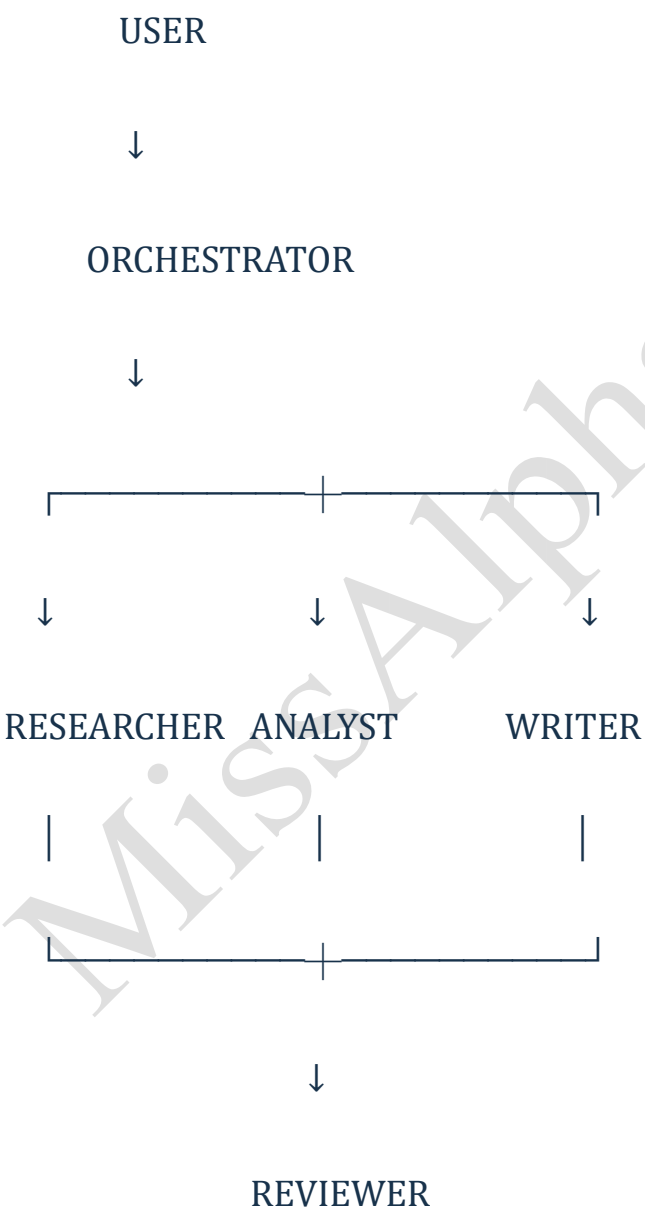

This introduces multi-agent architecture**.**

MissAlpha_AILabs

Scenario

Business question:

"Research the AI skills landscape and prepare an executive report." Instead of one AI doing everything:

MissAlpha_AILabs

↓

HUMAN REVIEW

↓

REPORT

AGENT ROLES

Agent 1 — Researcher

Finds relevant information.

Agent 2 — Analyst

Compares evidence.

Agent 3 — Writer

Creates the report. Agent

4 — Reviewer Checks

quality.

Human

Makes the final judgment.

MissAlpha_AILabs

ORCHESTRATOR PROMPT

You are the Orchestrator Agent.

Your responsibility is to coordinate a research team. Business

Question:

Research the current AI skills landscape and prepare

a concise executive report.

Assign tasks to:

1. Research Agent

2. Analysis Agent

3. Writing Agent

4. Review Agent **Workflow:**

Research

↓

Collect Evidence

↓

MissAlpha_AILabs

Analyze

↓

Draft

↓

Review

↓

Improve

↓

Human Approval

Do not allow the writer to create the final report

before sufficient research and analysis are available. The

reviewer must identify unsupported claims,

missing evidence and unclear conclusions.

MissAlpha_AILabs

The final report should clearly distinguish:

facts,

analysis,

and recommendations.

LIVE ACTIVITY

“Which agent should work first?” Options:

A. Writer
B. Researcher
C. Reviewer
D. Analyst Expected: B — Researcher Then:

“Who checks the research?”

Reviewer / Analyst depending on architecture.

Then:

“Who makes the final business decision?” Human.

THE BIG LESSON

MissAlpha_AILabs

“Multi-agent does not mean putting five AI chats together.” It

means:

SPECIALIZATION

+

CLEAR RESPONSIBILITIES

+

HANDOFFS

+

ORCHESTRATION

+

EVALUATION

Key Concept

Multi-Agent Architecture

MissAlpha_AILabs

ACTIVITY 05

AGENTIC DATA ANALYST

“Ask a Business Question. Let the Agent Investigate.”

This should be your most advanced activity and connects beautifully with your corporate-training/data-analysis background.

Scenario

Business question:

“Why did sales decline last quarter?”

Instead of asking AI: “Analyze this

CSV.”

create a workflow where the system performs multiple steps.

Suggested Stack

For the classroom demonstration:

MissAlpha_AILabs

CSV / SQL Database

↓

AI Agent

↓

Data Analysis

↓

Python / SQL Tool

↓

Visualization

↓

Validation

↓

Business Insight If

using n8n:

User Question

MissAlpha_AILabs

↓

n8n

↓

AI Agent

↓

SQL / Data Tool

↓

Analysis

↓

Validation

↓

Report

MissAlpha_AILabs

SAMPLE DATA

Use a simple sales dataset: order_id

date

product

category

region

customer_segment

quantity

revenue

discount

Keep the dataset small enough for a live demonstration.

MissAlpha_AILabs

AGENT OBJECTIVE

You are an AI Data Analyst Agent.

Your job is to investigate business questions using

the provided sales data.

Do not immediately provide a conclusion.

Follow this process:

1. Understand the business question.

2. Identify the required data. 3. Inspect the data

   structure.

4. Validate data quality.

5. Analyze relevant metrics.

6. Identify patterns.

7. Look for anomalies.

MissAlpha_AILabs

8. Compare relevant segments.

9. Generate visual evidence where appropriate.

10. Validate the analysis.

11. Generate business insights.

12. Clearly distinguish facts from interpretation.

Never invent values that are not present in the data.

QUESTION

Give the agent:

“Why did sales decline in Q2?” The

expected workflow:

BUSINESS QUESTION

↓

DATA DISCOVERY

↓

DATA VALIDATION

MissAlpha_AILabs

↓

QUERY / ANALYSIS

↓

EDA

↓

SEGMENT COMPARISON

↓

ANOMALY DETECTION

↓

VISUALIZATION

↓

VALIDATION

↓

BUSINESS INSIGHT

MissAlpha_AILabs

QUESTIONS THE AGENT SHOULD INVESTIGATE For

example:

Revenue

Did total revenue decrease?

Product

Which products contributed to the decline?

Region

Which region experienced the largest decline?

Customer

Did a particular customer segment decline?

Discount

Did discount changes affect revenue?

Quantity

Did sales volume decline?

MissAlpha_AILabs

FINAL OUTPUT FORMAT

Ask the agent to produce:

BUSINESS QUESTION

DATA USED

DATA QUALITY CHECK

KEY FINDINGS

1. Revenue

2. Products

3. Regions

4. Customers

5. Discounts

MissAlpha_AILabs

EVIDENCE

BUSINESS INTERPRETATION

POSSIBLE REASONS

RECOMMENDED ACTIONS

CONFIDENCE / LIMITATIONS

Key Concept

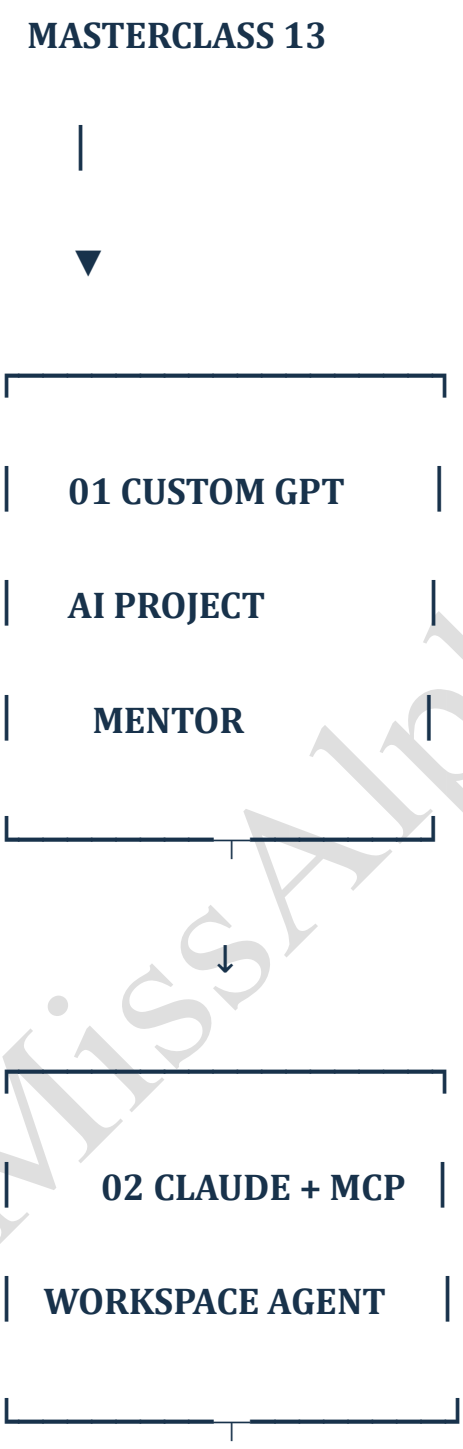

Agentic Data Analysis = Question → Data → Tools → Analysis → Validation → Insight Not:

Prompt → Chart → Done.

MissAlpha_AILabs

FINAL 5-ACTIVITY CHALLENGE

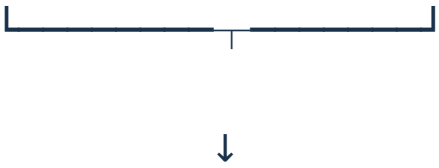

At the end of the practical book, give students this progression:

MissAlpha_AILabs

MissAlpha_AILabs
