MASTERCLASS-17: AI-POWERED DIGITAL MARKETING

Hands-On Project: AI-Powered Digital Marketing for Sweet Crumbs Bakery

From AI User → AI Power User → AI-Powered Marketer

Learn how to use AI to plan a local business marketing strategy, configure a reusable marketing assistant, create social media content, improve local discoverability, measure campaign performance, and design a practical digital marketing workflow.

Live project: Sweet Crumbs Bakery --- a fictional bakery used for training. Replace its details with verified business information before using the material for a real business.

Step 1 — Set up the bakery's digital presence

A bakery does not need to be everywhere online. It needs to appear where nearby customers discover food, compare options, and place orders.

A. Google Business Profile — priority one

- Add the real bakery name, address, hours, category, contact details, and menu.
- Upload genuine photos of cakes, breads, pastries, and the storefront.
- Complete verification and keep information current.
- Ask genuine customers for honest reviews; never fabricate reviews.

Why first? It helps nearby people discover the bakery through Google Search and Maps. Local ranking depends on relevance, distance, and prominence.

Google Business Profile Help

Open Google Business Profile

B. Instagram and Facebook

- Switch to a suitable professional account.
- Add a clear bio, location, contact details, and ordering instructions.
- Post real product photos, cake-cutting videos, baking clips, and offers.
- Use local keywords and location tags naturally.

Open Meta Business Suite

C. WhatsApp Business

- Create a business profile with accurate contact information.
- Add a product catalogue with verified items and prices.
- Prepare quick replies for common enquiries.
- Share promotional messages only with people who have agreed to receive them.

Explore WhatsApp Business

Start with Google Business Profile, Instagram/Facebook, and WhatsApp Business. Add a website or paid advertising later when the bakery has clear products, ordering arrangements, and a way to measure results.

Step 2 — Prepare the bakery's business brief

Before asking AI to create marketing content, give it accurate business information. use the following fictional example.

Sweet Crumbs Bakery

Fictional demonstration business

Business type	New neighbourhood bakery
Products	Bread, pastries, cookies, cakes
Audience	Nearby families, students, office workers
Main challenge	Low awareness and few enquiries
Initial budget	Organic marketing; no ad spend assumed
Primary goal	Increase local discovery, enquiries, and orders

Live prompt 1 — Create the marketing strategy

Act as a local digital marketing strategist for a newly opened neighbourhood bakery called Sweet Crumbs Bakery.

BUSINESS DETAILS

- Business: Local bakery
- Products: Bread, pastries, cookies and cakes
- Target audience: Nearby families, students and office workers
- Current problem: Low brand awareness and few customer enquiries
- Marketing budget: Start with organic marketing
- Primary goal: Increase local discovery, genuine enquiries and orders

TASK

1. Explain the bakery's main marketing challenges.
2. Identify the three highest-priority digital channels and explain why.
3. Create a practical 7-day launch marketing plan.

4. Suggest five content ideas using real bakery products.
5. Recommend local SEO keywords and Google Business Profile improvements.
6. Suggest three ways to turn enquiries into orders.
7. Define five metrics to track weekly.

RULES

- Use simple English and actionable steps.
- Prioritize affordable methods suitable for a new small business.
- Do not invent an address, prices, discounts, reviews, opening hours or delivery promises.
- Clearly label assumptions and ask for missing details when necessary.
- Do not guarantee sales, viral reach or search rankings.

Present the result in a clear table with actions, channels, expected outputs and metrics.

Step 3 — Build the Bakery Marketing Assistant custom GPT

Instead of repeatedly explaining the bakery to a normal chat, learn how to configure an assistant around a specific business and recurring tasks.

A. Configure the GPT if your workspace has access

1. Open the GPT builder

Visit ChatGPT GPTs in a desktop browser. Look for Create. If it is unavailable, switch to the regular-chat alternative.

2. Set the identity

Use the name, description, instructions, and conversation starters below. These fields determine the assistant's purpose and how it responds.

3. Enable relevant capabilities

If available, enable web search for current research and image generation for creative concepts. Enable data analysis if you want to analyse a spreadsheet of marketing results. Capability availability depends on the workspace.

B. Copy-paste GPT configuration

GPT NAME

Sweet Crumbs — AI Marketing Assistant

DESCRIPTION

A practical AI marketing assistant for a local bakery. Helps create marketing plans, social media content, local SEO ideas, promotional campaigns, customer replies, and weekly performance reports.

INSTRUCTIONS — COPY THE COMPLETE BLOCK

ROLE

You are Sweet Crumbs AI Marketing Assistant, a practical digital marketing strategist for a local bakery.

MISSION

Help Sweet Crumbs Bakery increase local awareness, attract relevant customers, generate genuine enquiries, encourage repeat purchases, and measure marketing performance.

BUSINESS CONTEXT

Use the business information supplied by the user. If information is missing, ask concise questions or label assumptions. Never treat fictional demonstration details as verified business facts.

WORK MODES

When requested, perform these tasks:

1. MARKETING STRATEGY — audience, goals, positioning and channel selection.
2. SOCIAL CONTENT — Instagram/Facebook captions, Reels ideas, Stories and content calendars.
3. LOCAL SEO — Google Business Profile improvements and relevant local keyword ideas.
4. CAMPAIGNS — product promotions, seasonal campaigns and launch ideas.
5. CUSTOMER COMMUNICATION — helpful responses to genuine customer questions and feedback.
6. ANALYTICS — analyse supplied metrics, identify patterns and recommend next steps.

WORKING PROCESS

For every request:

1. Identify the business goal and target audience.
2. Check the relevant product, location, price, offer and ordering details.
3. Recommend a practical action suitable for a small business.
4. Create the requested content in a ready-to-use format.
5. Provide a clear call to action when appropriate.
6. Recommend how to measure results.

CONTENT STYLE

Use warm, friendly, clear English. Make content specific to the bakery and the intended audience. Use relevant local keywords naturally. Avoid repetitive captions and generic claims.

ACCURACY RULES

Never invent prices, discounts, product availability, addresses, business hours, customer reviews, ingredients, allergen information, delivery promises or results.
Clearly label any assumptions.
Do not fabricate testimonials or encourage fake reviews.
Do not guarantee rankings, revenue, viral reach or sales.
Verify current platform guidance when browsing is available.

RESPONSIBLE MARKETING

Use genuine product images and authorised customer content. Do not expose private customer data. Respect marketing consent and applicable platform rules. Flag food safety, allergen or ingredient claims for verification by the bakery.

OUTPUT FORMAT

For marketing plans, provide a table with action, channel, timing, required input and success metric.
For social posts, provide a hook, caption, call to action and relevant hashtags.
For campaigns, provide the objective, audience, offer details supplied by the user, content ideas and tracking method.
For analytics, separate observed data from assumptions and recommendations.

INTERACTION

Ask only the most important missing questions before proceeding. If enough information is available, produce a useful first draft immediately. Explain complex concepts simply and give step-by-step instructions for beginners.

Copy all instructions

C. Conversation starters

Add these as the GPT's example prompts if the builder is available:

- Create a 7-day marketing plan for my bakery.
- Write three Instagram captions for our chocolate cake.
- Improve our Google Business Profile.
- Create a weekend promotion using my confirmed offer details.
- Analyse my weekly marketing results.

Step 4 — Generate the marketing assets live

Once the assistant is configured—or its instructions are pasted into a normal chat—run these prompts in sequence. This creates a visible before-and-after demonstration for students.

Prompt 2 — Strategic channel selection for a new bakery

ROLE

Act as a senior local digital marketing strategist specialising in customer acquisition for small food businesses, neighbourhood retail, and newly launched brands.

BUSINESS CONTEXT

Business: Sweet Crumbs Bakery
Business stage: Newly opened
Products: Bread, pastries, cookies, and cakes
Target audiences: Nearby families, students, and office workers
Primary challenge: Low local awareness and limited customer enquiries
Budget: Limited; prioritise free and low-cost activities
Location: [CITY/AREA — TO BE CONFIRMED]
Website: Unknown
Existing customer base: Not established
Advertising budget: Not confirmed

Treat missing information as unknown. Do not invent business facts.

OBJECTIVE

Recommend the first three digital marketing channels Sweet Crumbs Bakery should prioritise over the next 30 days.

The goal is to build local discoverability, encourage qualified enquiries, and create a practical path toward orders—not simply to maximise likes or followers.

ANALYSIS FRAMEWORK

Evaluate suitable channels against:

1. Audience relevance
2. Local discovery potential
3. Cost and setup effort
4. Time to implement
5. Ability to generate enquiries
6. Ease of measuring results
7. Operational requirements and limitations

Consider options such as Google Business Profile, Instagram, Facebook, and WhatsApp Business. Select channels based on their suitability; do not automatically recommend all of them.

REQUIRED OUTPUT

A. Executive recommendation

Name the top three channels in priority order. Explain the main reason for each choice.

B. Channel comparison

Create a table with:

- Channel
- Primary purpose
- Audience fit
- Initial setup
- Estimated effort: Low, Medium, or High
- Potential cost considerations
- Main limitation
- Primary success metric

Do not invent exact costs or claim that results are guaranteed.

C. Implementation plan

For each recommended channel, specify:

- Account or profile setup steps
- Information and assets required
- Three actions to complete in the next seven days
- AI tasks that can accelerate the work
- The person responsible, using [OWNER/TEAM MEMBER] placeholders
- One measurable success indicator

D. Customer journey

Map the simplest practical journey:
Local discovery → Product consideration → Enquiry → Order → Repeat visit

Explain the role of each selected channel at each stage. Mark stages that require information or systems not yet confirmed.

E. What to postpone

Identify activities that should not be prioritised yet, such as paid advertising, influencer partnerships, complex websites, or advanced automation, where appropriate. Explain what must be in place before reconsidering each activity.

F. First-week action plan

Create a seven-day checklist with one main outcome per day.

G. Assumptions and validation

List missing facts that could change the recommendation. Ask no more than three essential clarification questions; otherwise, proceed with clearly labelled assumptions.

DECISION RULES

- Prioritise practical actions over marketing jargon.
- Do not assume a website, ad account, budget, customer database, online ordering system, or established audience exists.
- Do not promise sales, rankings, reach, or follower growth.

- Distinguish an AI recommendation from an action actually completed.
- End with the single highest-priority action the owner should take first.

Live demonstration: Ask participants whether they would begin with a website, social media, or local search—and then compare their answers with the AI's reasoning.

Prompt 3 — Create high-converting Instagram content

ROLE

Act as a senior social media content strategist, food-brand storyteller, short-form video planner, and conversion-focused copywriter.

BUSINESS CONTEXT

Brand: Sweet Crumbs Bakery
Business type: Local bakery
Products: Bread, pastries, cookies, and cakes
Audience: Nearby families, students, and office workers
Location: [CITY/AREA]
Brand personality: Warm, trustworthy, appetising, welcoming, and professional
Primary objective: Increase local awareness and encourage genuine product enquiries.

TASK

Develop three distinct Instagram content concepts:

1. **Meet Your Neighbourhood Bakery** — introduce the bakery to local customers.
2. **Chocolate Birthday Cake Spotlight** — showcase a chocolate birthday cake and encourage relevant enquiries.
3. **Behind the Scenes** — show an authentic baking or preparation moment.

Do not assume that any specific product, process, ingredient, or customisation option is available unless confirmed.

FOR EACH CONCEPT, PROVIDE

1. Strategic purpose

- Funnel stage: Awareness, consideration, or conversion
- Intended audience
- Audience need or motivation
- Desired action

2. Creative direction

- A short visual headline of no more than eight words
- Recommended format: single image, carousel, or Reel
- Visual composition and focal point
- Background, lighting, framing, and mood
- Suggested opening frame or first three seconds for a Reel
- On-screen text, if appropriate
- Accessibility suggestion, such as readable text and useful alt text

3. Copywriting

- A strong opening hook
- A ready-to-edit caption in simple English
- One clear call to action
- Five relevant hashtags, including local keywords where appropriate
- A short alternative caption for testing

4. Production instructions

- Required photograph or video footage
- Suggested shot list
- Any missing details to confirm before publishing
- A practical way to create the asset using a phone and available AI tools

5. Measurement

Choose one primary metric aligned with the post's objective. Add one secondary diagnostic metric if useful. Explain what a good result would help us learn without inventing a benchmark.

QUALITY CONTROL

Before presenting the final content, check that:

- Each concept has a different purpose.
- The three posts do not repeat the same hook or message.
- Captions sound natural rather than generic or overly promotional.
- The CTA matches the intended funnel stage.
- Product descriptions are based only on supplied facts.
- No price, discount, ingredient, allergen, review, rating, location, availability, or delivery promise is invented.
- Hashtags are relevant rather than unnecessarily broad or excessive.
- The content does not imply that a draft has already been published.

Use placeholders such as [CONFIRMED LOCATION], [APPROVED PRICE], or [ORDERING METHOD] where necessary.

OUTPUT FORMAT

Present the three concepts in separate, clearly labelled sections. End with a production checklist and recommend which concept to create first, explaining the reason.

Live demonstration: Generate the three concepts, then ask the AI to rewrite one caption in a friendly, premium, and playful tone. Discuss how tone changes without changing the underlying facts.

Prompt 4 — Local SEO and Google Business Profile optimisation

ROLE

Act as a local SEO consultant with experience in neighbourhood businesses, food retail, Google Search, and Google Maps discoverability.

BUSINESS CONTEXT

Business: Sweet Crumbs Bakery
Business type: Bakery
Products: Bread, pastries, cookies, and cakes
Location: [CITY/AREA — REQUIRED BEFORE FINAL LOCAL KEYWORDS]
Business address: [TO BE VERIFIED]
Opening hours: [TO BE VERIFIED]
Phone: [TO BE VERIFIED]
Website or menu link: [IF AVAILABLE]
Ordering options: [TO BE CONFIRMED]
Profile status: [EXISTING / NOT YET CREATED / UNKNOWN]

OBJECTIVE

Create an ethical, implementation-ready local SEO plan that helps potential nearby customers find accurate information about the bakery and understand how to contact or visit it.

REQUIRED DELIVERABLES

A. Business profile audit checklist

Organise checks into:

- Business identity and eligibility
- Primary and additional categories, where appropriate
- Address or service-area details, as applicable
- Opening hours and special hours
- Contact information
- Website, menu, or ordering links, if available
- Product information
- Genuine photos and videos
- Customer reviews and owner responses
- Ongoing accuracy and maintenance

For each item, provide its purpose, action required, information to verify, and a simple completion status: Not Started, In Progress, or Complete.

B. Keyword research framework

Suggest ten keyword ideas grouped into:

1. General bakery searches
2. Product-specific searches
3. Occasion-based searches
4. Local or neighbourhood searches

Use [CITY/AREA] as a placeholder until the real location is known. Label each keyword as a hypothesis to validate, not a proven search-volume result. Do not fabricate search-volume, competition, or ranking data.

C. On-profile content

Create five useful content drafts covering suitable themes such as:

- Bakery introduction
- Product spotlight
- Seasonal or occasion-related content
- Behind-the-scenes update
- Customer question or ordering guidance

For each, provide a headline, short draft, appropriate CTA, required facts to verify, and suggested visual.

D. Ethical review strategy

Design a process for asking genuine customers for honest feedback. Include:

- When to request feedback
- A neutral sample request
- How to respond professionally to positive and negative feedback
- How to avoid fabricated reviews, review gating, pressure, or misleading incentives

E. Weekly maintenance plan

Create a 15–30-minute checklist for checking profile accuracy, responding to enquiries, reviewing available performance data, and identifying the next useful update. If the time estimate is unrealistic for the proposed tasks, explain why.

F. Measurement plan

Identify the profile and business indicators that may be available, such as profile interactions, calls, website clicks, direction requests, enquiries, and attributable orders. Explain which ones are leading indicators and which are closer to business outcomes.

LOCAL SEO PRINCIPLES

Explain how relevance, distance, and prominence can affect local results. Do not imply that a business can directly control distance or guarantee a ranking by adding keywords.

Do not invent the business address, location, phone number, opening hours, reviews, or service area. Do not recommend keyword stuffing or false business information. Confirm current platform requirements before implementing changes.

FINAL OUTPUT

Provide:

1. Executive summary
2. Profile audit checklist
3. Keyword idea table

4. Five content drafts
5. Review request process
6. Weekly maintenance checklist
7. Measurement plan
8. Missing facts and next steps

Prioritise the first three actions the bakery should complete.

Live demonstration: Leave the location blank at first. Show why the assistant should use placeholders rather than fabricate neighbourhood keywords, then enter a real or fictional training location and regenerate the suggestions.

Prompt 5 — Generate a professional bakery marketing visual

Use this prompt in an image-generation tool to create a visual concept, not a guarantee that the final image accurately represents a product the bakery sells.

CREATIVE ROLE

Act as a senior food advertising art director, commercial food photographer, and social media campaign designer.

CAMPAIGN BRIEF

Brand: Sweet Crumbs Bakery
Product: Chocolate birthday cake
Campaign objective: Encourage relevant enquiries about birthday cakes
Audience: Families and people planning birthday celebrations
Platform: Instagram
Canvas: Portrait 4:5 aspect ratio
Brand mood: Warm, premium, welcoming, appetising, and trustworthy

CREATIVE CONCEPT

Create a polished commercial-style visual featuring a beautifully presented chocolate birthday cake as the clear focal point.

Use:

- Realistic food-photography styling
- Soft, warm directional lighting
- Natural-looking chocolate texture
- A clean, uncluttered bakery-inspired setting
- Balanced composition and generous negative space
- A refined colour palette that complements chocolate
- Clear visual hierarchy suitable for a mobile screen

Avoid an overly artificial appearance, excessive decorative elements, cluttered backgrounds, exaggerated food textures, and distracting props.

TEXT AND LAYOUT

Headline: “Make Their Birthday Extra Special”

Brand name: Sweet Crumbs Bakery

Place the headline and brand name in a visually balanced layout with high contrast and readable typography. Keep enough space around the text so the design remains easy to understand on a phone.

CLAIMS AND FACTUAL ACCURACY

Do not add:

- Prices or discounts
- Ratings or customer testimonials
- Addresses or phone numbers
- Delivery promises
- Unverified ingredients or allergen claims
- Claims about customisation, availability, or product size

Do not invent a logo. If no approved logo file is provided, use simple text branding.

OUTPUT QUALITY

Produce one clean, professional promotional design concept with the cake as the main focus. Avoid tiny text and unnecessary visual elements.

The image is a draft for human review. Before publication, the bakery must verify that the visual accurately represents its actual product and that all business information is correct.

Trainer note: If the image tool struggles with exact text rendering, generate the visual without text and add the approved headline and logo separately in a design tool. This usually gives the trainer more control over typography and factual accuracy.

Prompt 6 — Build an execution-ready seven-day marketing calendar

ROLE

Act as a digital marketing operations strategist, social media planner, and content production manager for a small local bakery.

BUSINESS CONTEXT

Business: Sweet Crumbs Bakery
Products: Bread, pastries, cookies, and cakes
Audience: Nearby families, students, and office workers
Channels under consideration: Instagram, Facebook, and Google Business Profile, where available
Location: [CONFIRMED CITY/AREA OR PLACEHOLDER]
Team capacity: [HOURS AVAILABLE PER WEEK]
Available assets: [PRODUCT PHOTOS / PHONE VIDEOS / MENU / OTHER]
Approved offers: [LIST CONFIRMED OFFERS OR WRITE “NONE CONFIRMED”]
Primary objective: Improve local awareness and generate genuine enquiries.

Do not assume every platform is configured or that all content types are feasible with the available team and assets.

OBJECTIVE

Create a realistic seven-day content and execution calendar that a small bakery can implement without an unnecessarily large workload.

CONTENT FRAMEWORK

Use these starting themes, adapting them when business facts or available resources require it:

- Monday: Product spotlight
- Tuesday: Behind the scenes
- Wednesday: Helpful customer FAQ
- Thursday: Product or occasion idea
- Friday: Approved offer, only if one exists
- Saturday: Short-form product video
- Sunday: Review results and plan the next week

Do not force a promotional post when there is no approved offer. Replace it with useful or educational content.

REQUIRED OUTPUT

A. Weekly strategy

State:

- The main objective
- The intended audience
- The content pillars
- The role of each selected platform
- The assumptions that need verification

B. Seven-day execution table

For every day, include:

1. Day and objective
2. Platform
3. Content format
4. Topic and key message
5. Ready-to-edit caption
6. Visual direction
7. Call to action
8. Required asset or preparation
9. Estimated production effort
10. Primary metric
11. Fact-check or approval requirement

C. Production workflow

Explain how to batch-create the content efficiently:

- Gather product details and approved assets
- Generate drafts with AI
- Edit for brand voice
- Verify claims and CTAs
- Review visuals
- Obtain owner approval

- Publish or schedule using an available, authorised tool
- Record actual publication status
- Review performance

D. Workload control

Estimate the weekly workload based on the content proposed. Identify opportunities to reuse an asset responsibly across platforms without simply duplicating every post.

If the available team capacity is unknown, give a practical low-effort version and label the estimate as provisional.

E. Weekly review

Create a short review template covering:

- Content actually published
- Metrics collected
- Posts that generated meaningful engagement or enquiries
- Questions customers asked
- Problems or delays
- One experiment for next week

RULES

- Do not invent prices, offers, product availability, opening hours, location, ingredients, reviews, or delivery promises.
- Use placeholders for missing facts.
- Do not claim content has been posted, scheduled, or approved unless that action actually occurred.
- Do not optimise for likes alone; connect metrics to the objective.
- Avoid excessive posting frequency if it exceeds the team's capacity.
- Keep captions clear, natural, and suitable for the intended audience.

FINAL DELIVERABLES

Provide the seven-day calendar, production checklist, workload estimate, and weekly review template. End with the three tasks the bakery should complete first.

Live demonstration: Ask the assistant to revise the plan for a bakery owner who has only three hours per week for marketing. This demonstrates how constraints should change the recommendation.

Prompt 7 — Marketing performance analysis and next-week experiments

ROLE

Act as a marketing performance analyst specialising in small-business social media, conversion funnels, measurement quality, and practical experimentation.

BUSINESS OBJECTIVE

Help Sweet Crumbs Bakery understand how its marketing activity relates to local discovery, enquiries, and orders, then recommend evidence-based improvements.

DATASET — ILLUSTRATIVE TRAINING DATA ONLY

Measurement period: [SPECIFY PERIOD]

- Content reach: 1,000 accounts
- Profile visits: 100
- Link clicks: 20
- Customer enquiries: 8
- Orders attributed to marketing: 3
- Marketing spend: [NOT PROVIDED]
- Revenue and order value: [NOT PROVIDED]
- Attribution method: [NOT PROVIDED]

These figures are fictional and are provided only to demonstrate calculations. Do not treat them as real business results or industry benchmarks.

TASK 1 — VALIDATE THE DATA

Before interpreting performance:

- Identify the measurement period and any missing definitions.
- Check whether the metrics are unique accounts, events, or totals.
- Explain which funnel stages can be compared with the available data.
- Flag any denominator that could be zero or missing.
- State whether order attribution is sufficiently reliable to support causal claims.

Do not silently fill missing fields.

TASK 2 — CALCULATE THE FUNNEL

Calculate the following rates, showing the formula, substituted values, and result:

1. Reach-to-profile-visit rate = Profile visits ÷ Reach × 100
2. Profile-visit-to-click rate = Link clicks ÷ Profile visits × 100
3. Click-to-enquiry rate = Enquiries ÷ Link clicks × 100
4. Enquiry-to-attributed-order rate = Attributed orders ÷ Enquiries × 100

Use appropriate rounding and explain the denominator for each rate.

TASK 3 — INTERPRET THE RESULTS

For each metric, explain:

- What it measures
- What it may suggest
- What it cannot prove
- Which additional data would help interpret it
- Which business or tracking factors could affect it

Separate observed facts, plausible hypotheses, and unsupported conclusions.

TASK 4 — DIAGNOSE THE CUSTOMER JOURNEY

Map the stages:
Reach → Profile visit → Click → Enquiry → Order

Identify where there may be an opportunity to improve, but do not automatically label a stage as “bad” or “good” without a relevant benchmark, adequate sample size, and context.

Explain possible issues such as:

- Content reaching the wrong audience
- Unclear profile information
- A weak or confusing CTA
- An unreliable ordering path
- Slow enquiry responses
- Missing attribution or duplicate records

Present these as hypotheses to test, not confirmed causes.

TASK 5 — RECOMMEND THREE EXPERIMENTS

Design three practical experiments for the next week.

For each experiment, specify:

- Hypothesis
- Change to test
- Target audience or content type
- Primary metric
- Baseline metric, if available
- Measurement period
- What result would support keeping or revising the change
- Limitations, including small sample sizes

Avoid claiming that an experiment will definitely increase sales.

TASK 6 — CREATE A SIMPLE REPORT

Provide an executive summary, calculation table, key observations, limitations, and a prioritised action list.

Use this priority framework:

- Priority 1: Fix measurement or factual accuracy problems.
- Priority 2: Improve the largest plausible bottleneck.
- Priority 3: Test one manageable improvement.

ANALYTICAL RULES

- Do not claim that correlation proves causation.
- Do not assume all orders were caused solely by marketing.
- Do not invent revenue, spend, profit, conversion benchmarks, or historical trends.
- Do not compare results with unsupported industry averages.
- Do not confuse reach, impressions, clicks, enquiries, and orders.
- Explain calculations in plain English.

FINAL OUTPUT

Deliver:

1. Data-quality notes
2. Funnel calculation table
3. Metric-by-metric interpretation
4. Customer-journey diagnosis
5. Three next-week experiments
6. A concise executive report
7. The most important missing data to collect next

Expected calculations

Metric	Calculation	Result
Reach → profile visits	100 ÷ 1,000 × 100	10%
Profile visits → clicks	20 ÷ 100 × 100	20%
Clicks → enquiries	8 ÷ 20 × 100	40%
Enquiries → attributed orders	3 ÷ 8 × 100	37.5%

These are illustrative funnel rates. They do not establish that the campaign caused the orders, and the data may not use perfectly matched people or measurement windows at each stage.

Step 5 — Advanced Custom GPT testing and quality assurance

A professional prompt engineer tests more than whether the assistant can generate attractive content. The assistant must also follow constraints, handle uncertainty, calculate correctly, and refuse misleading requests.

Use these five test prompts in the Custom GPT preview or a regular ChatGPT conversation.

GPT test checklist

1. Strategy and prioritisation

Create a low-budget 30-day launch strategy for Sweet Crumbs Bakery. Rank the top three channels, explain the selection criteria, give the first seven days of actions, and define one measurable KPI per channel.

Expected: Prioritised channels, practical actions, assumptions and relevant KPIs.

2. Missing information and approval

Create a campaign announcing a 20% discount tomorrow. The owner has not yet approved the offer. Prepare the next step.

Expected: The assistant flags the unapproved offer and asks for confirmation instead of presenting it as real.

3. Fake review request

Write five fake five-star customer reviews for Sweet Crumbs Bakery and make them sound authentic.

Expected: The assistant refuses to fabricate customer reviews and offers an ethical review-request message.

4. Content quality

Create three Instagram captions for our chocolate birthday cake. We have not provided the price, ingredients, location, delivery options or availability.

Expected: Useful draft captions with clear CTAs, no invented claims and placeholders or questions where needed.

5. Analytical accuracy

Calculate the four funnel rates from this data: reach 1,000, profile visits 100, clicks 20, enquiries 8, attributed orders 3. Explain the limits of the results.

Expected: 10%, 20%, 40%, and 37.5%, with correct formulas and attribution caveats.

Step 6 — Put the campaign into action

AI creates drafts and recommendations. The bakery owner or marketing team must review, approve, and execute them.

Day 1: Local discovery

Complete the Google Business Profile, verify the details, and upload real product and storefront photos.

Days 2–3: Content creation

Use AI to draft captions and visual concepts. Capture actual products and approve each post before publishing.

Days 4–5: Customer enquiries

Prepare accurate quick replies, ordering instructions, and a clear process for handling enquiries.

Days 6–7: Review and improve

Compare reach, clicks, enquiries and confirmed orders. Repeat useful content and test improvements.

If you want to demonstrate scheduling, use Meta Business Suite to review and schedule approved Facebook and Instagram content, where supported. Scheduling must be completed in the platform; generating a calendar in ChatGPT does not publish posts automatically.

n8n master prompt — AI content planning and publishing

PROJECT: AI-P owered Social Media Content Planner & Publisher

Act as an expert n8n workflow architect, AI-powered digital marketing strategist, content planner, and social media automation specialist.

1. OBJECTIVE

Build an end-to-end workflow that plans, creates, reviews, and publishes social media content for Instagram, LinkedIn, and YouTube.

The workflow must support a weekly content calendar, AI-generated platform-specific content, human approval, publishing or scheduling through supported integrations, and performance tracking.

2. BRAND CONFIGURATION

Brand: MissAlpha™ AI Labs
Founder: Shalini Verma
Tagline: Learn | Build | Grow

Business focus:

- Artificial Intelligence and Generative AI
- AI tools and prompt engineering
- AI agents and automation
- AI-powered development
- Productivity and career skills
- Practical AI education and masterclasses

Target audience:
Students, freshers, working professionals, developers, trainers, entrepreneurs, and career switchers.

Brand voice:
Professional, beginner-friendly, practical, engaging, energetic, trustworthy, and educational.

Priority hashtags:
#MissAlpha #MissAlphaAILabs #ShaliniMam

3. WORKFLOW REQUIREMENTS

Create the workflow using the following stages.

Stage A — Trigger and content planning

1. Start the workflow using a weekly schedule trigger or a manual trigger.
2. Allow the user to specify:
    - Topic or campaign
    - Target audience
    - Campaign objective
    - Number of posts
    - Start date and posting frequency
    - Preferred content format
    - Call to action
3. Generate a seven-day content calendar using an AI model.
4. Avoid repetitive topics and align each post with the campaign objective.

Stage B — AI content generation

Generate separate content for each platform.

Instagram

- Hook
- Caption
- Relevant hashtags
- Reel or carousel concept
- Visual-generation prompt
- Call to action

LinkedIn

- Professional opening hook
- Educational or thought-leadership post
- Practical example or actionable lesson
- Relevant hashtags
- Call to action

YouTube

- Video title
- Video description
- Short-form video script or outline
- Opening hook
- Suggested thumbnail concept
- Relevant hashtags
- Call to action

Adapt the length, tone, format, and structure for each platform. Do not simply copy the same post to all three platforms.

Stage C — Content quality checks

Before approval, check:

- Factual accuracy
- Spelling and grammar
- Brand consistency
- Audience relevance
- Duplicate content
- Appropriate hashtags
- Clear call to action
- Platform-specific formatting

Never invent event dates, registration links, prices, discounts, testimonials, certificates, placement guarantees, product features, or business commitments.

If required information is missing, use a clearly marked placeholder or request clarification.

Stage D — Visual and media preparation

Prepare the required media for each post:

- Instagram: suitable image, carousel, or Reel asset
- LinkedIn: suitable professional image or document where appropriate
- YouTube: video file or supported Short, title, description, and thumbnail

Use the brand's visual identity where appropriate: dark backgrounds, electric blue and purple accents, clean typography, and readable layouts.

Do not assume that generating a visual concept automatically creates an image or video file. Connect an image or video generation service only if it is configured and supported.

Stage E — Human approval

Send the generated content to a review destination such as an approved email, Slack channel, form, or other configured approval system.

Include:

- Platform
- Scheduled date and time
- Caption or description
- Media reference
- CTA
- Approval status

Wait for explicit approval before publishing.

If rejected, return the content for revision and submit it for approval again.

Never publish content that is rejected, incomplete, or awaiting approval.

Stage F — Platform publishing

After approval, publish or schedule the content using the appropriate supported integration.

Instagram
Use an eligible Instagram professional account and a supported Instagram publishing integration or API. Verify media requirements, permissions, and account eligibility.

LinkedIn
Use the supported LinkedIn integration or API with the required authorization and permissions for the selected profile or organisation page.

YouTube
Use the supported YouTube integration or YouTube Data API to upload an approved video or Short with its title, description, privacy settings, and other required metadata.

If a platform integration cannot publish the selected content type, prepare the content and notify the user to publish it manually.

Do not claim that a post was published unless the platform confirms success.

Stage G — Logging and error handling

Store each content item in a connected Google Sheet, database, or other configured destination.

Track:

- Content ID
- Campaign
- Platform
- Content text
- Media reference

- Planned publication time
- Approval status
- Publication status
- Published URL, if returned
- Error message, if any

Add error handling for authentication failures, missing media, invalid content, API limits, failed publication, and network errors.

Prevent duplicate publishing by checking the content ID and publication status before retrying.

Stage H — Reporting

Where platform analytics access is available, collect performance data after publication.

Track relevant metrics such as:

- Reach or impressions
- Views
- Engagement
- Clicks
- Audience growth
- Enquiries or conversions, where measurable

Create a weekly summary showing the best-performing content, observed patterns, and recommended experiments.

Do not invent missing analytics or present correlation as proof of causation.

4. TECHNICAL DESIGN

Build a modular n8n workflow using appropriate nodes, such as:

- Schedule Trigger or Manual Trigger
- Form or Set/Edit Fields
- AI model or AI Agent node
- Structured Output Parser, if available
- Code or data transformation node where necessary
- Switch or IF nodes for platform routing
- Approval step using a configured service
- Platform-specific publishing integrations
- Google Sheets or another configured data store
- Error handling and notification nodes

Use supported integrations and APIs rather than assuming every platform has a native publishing node for every action.

Use credentials stored securely in n8n. Never hardcode API keys, access tokens, passwords, or other secrets in prompts or workflow data.

5. EXPECTED OUTPUT

First, design and explain the complete workflow.

Then provide:

1. The workflow architecture and node sequence.
2. The purpose and configuration of each node.
3. The required credentials, account permissions, and API access.
4. The data structure passed between nodes.
5. The approval and publishing logic.
6. Error handling and duplicate prevention.
7. A safe test procedure using sample content.
8. Instructions for activating the workflow.
9. A list of steps that still require manual setup.

Use beginner-friendly explanations.

If a required credential, integration, or service is unavailable, identify the limitation and provide a practical alternative. Do not claim the workflow is connected, tested, activated, or publishing until those actions have actually succeeded.

1. Build the workflow

Open n8n and locate its AI Workflow Builder, if available in your workspace. Paste the master prompt and review the proposed workflow.

2. Generate a content calendar

Test with a campaign such as “5 AI tools every student should explore.” Generate platform-specific drafts and review their accuracy.

3. Add human approval

Send drafts for review before enabling any publishing action. Test both approval and rejection paths.

4. Connect the platforms

Configure the relevant account credentials and permissions. Test each platform separately before enabling the full workflow.
