DEMO 1 — IDEA → BUSINESS REQUIREMENTS { Platform: Claude}

PROMPT 1 — E-commerce Business Requirement Generator

Act as a Senior Product Manager, E-commerce Consultant and Business Analyst.

I want to create an E-commerce website.

Brand: [BRAND NAME]

Products: [PRODUCT CATEGORY]

Audience: [TARGET AUDIENCE]

Market: [MARKET / REGION]

Business Goal: [BUSINESS GOAL]

Before suggesting any technology or generating any code, please:

1. Define 2-3 customer personas for this audience.
2. Identify the top problems these customers are trying to solve.
3. Define clear business objectives for this website.
4. Define the single primary conversion action (e.g., purchase, signup, booking).
5. List functional requirements (features the site must have).
6. List non-functional requirements (performance, security, accessibility).
7. Separate MVP features from "future phase" features.
8. Identify trust requirements (what makes a stranger comfortable buying here).
9. Identify basic security considerations for this type of site.
10. Ask me any missing discovery questions you need answered before proceeding.

Output format: a clear Business Requirements Document in simple, non-technical language, using headings and short bullet points.

Example –

Act as a Senior Product Manager, E-commerce Business Analyst and UX Strategist.

I want to build a modern e-commerce website called “NovaCart”.

BUSINESS:

NovaCart is an online lifestyle shopping platform for young Indian consumers.

TARGET AUDIENCE:

Students, young professionals and online shoppers aged approximately 18–35.

PRODUCT CATEGORIES:

- Fashion
- Electronics
- Accessories
- Lifestyle Products

PRIMARY GOAL:

Enable customers to discover products easily, build trust in the brand, add products to cart and complete a simple shopping journey.

Before suggesting technology or writing code, create a concise Business Requirements Document.

Include:

1. Target customer personas
2. Customer needs and pain points
3. Primary business objective

4. Primary conversion action
5. Essential website pages
6. Core e-commerce features
7. MVP features
8. Future advanced features
9. Trust-building elements
10. Security considerations
11. Mobile-user requirements
12. Key questions that should be answered before development

Keep the output simple, practical and suitable for a beginner-friendly e-commerce project.

Do not generate code yet.

DEMO 2 — REQUIREMENTS → SITEMAP

Platform: Claude

PROMPT 2 — E-commerce Sitemap + User Journey Generator

Act as a UX Information Architect.

Using the business requirements for [BRAND NAME], generate a complete sitemap covering: Home, Shop, Categories, Product Detail, Search, Cart, Checkout, Account, About, Contact, FAQ, and Policies.

For each page, provide:

- Purpose (why this page exists)
- Key sections on the page
- Primary CTA
- The user action expected on this page
- Any data required to power this page

Then generate a step-by-step user journey for the primary conversion path:

Homepage -> Category -> Product -> Cart -> Checkout

Describe what the user sees and does at each step, and flag any point where a user might drop off or hesitate.

Example –

Now act as a Senior UX Information Architect.

Using the NovaCart business requirements above, create a professional website sitemap.

The website should include:

Home

Shop

Categories

Product Details

Search

Cart

Wishlist

Checkout

Account

About

Contact

FAQ

Policies

For every page provide:

1. Purpose
2. Main sections
3. Primary CTA
4. Expected user action

Then create the main customer journey:

Homepage

→ Category

→ Product Details

→ Add to Cart

→ Cart

→ Checkout

→ Order Confirmation

Keep the structure concise and practical.

Finally, identify the 3 most important pages we must optimize for conversion.

DEMO 3 — MASTER PROMPT → BUILD COMPLETE WEBSITE

Platform: Lovable

PROMPT 3 — Complete AI Website Master Build Prompt

Act as a Senior Full-Stack Web Developer and UI/UX Designer.

Build a premium, modern E-commerce website for [BRAND NAME], a [PRODUCT CATEGORY] brand targeting [TARGET AUDIENCE].

Before building, summarize your architecture and assumptions in 3-5 bullet points so I can confirm before you proceed.

Requirements:

ROLE: Senior e-commerce web developer and designer

GOAL: A trustworthy, conversion-focused online store

BUSINESS: [BUSINESS GOAL / BRAND DESCRIPTION]

AUDIENCE: [TARGET AUDIENCE]

PAGES: Home, Category, Product Detail, Cart, Checkout, About, Contact, FAQ

FEATURES: Navigation, hero section, product categories, product grid, product detail experience, search, filters, cart, wishlist concept, mock checkout (no real payment credentials), testimonials/reviews, FAQ, newsletter signup, footer

DESIGN STYLE: Premium but not overdesigned, clean typography, generous whitespace, mobile-first

CONTENT: Use realistic sample product data appropriate to [PRODUCT CATEGORY]

CTA: Clear, action-oriented calls to action on every page

TECHNICAL REQUIREMENTS: SEO-friendly HTML structure, semantic headings, alt text placeholders

RESPONSIVE BEHAVIOR: Must work cleanly at 320px, tablet, and desktop widths

ACCESSIBILITY: Sufficient color contrast, keyboard-navigable, descriptive labels

SEO: Clean title/meta structure per page

LOADING/ERROR/EMPTY STATES: Include a loading state, an error state, and an empty-cart state

OUTPUT: A working front-end prototype with sample product data.

QUALITY CHECK: Before finishing, self-review the output against every requirement above and flag anything you were unable to include.

IMPORTANT: Do not use real payment credentials, real API keys, or any production secrets anywhere in this build.

Example –

Create a premium, modern, fully responsive e-commerce website called “NovaCart”.

BRAND CONCEPT:

NovaCart is a modern lifestyle shopping destination targeting young Indian consumers aged approximately 18–35.

PRODUCT CATEGORIES:

- Fashion
- Electronics
- Accessories
- Lifestyle Products

BUSINESS GOAL:

Create a trustworthy, visually premium shopping experience that helps users discover products, explore categories, view product details, add items to cart and experience a realistic demo checkout flow.

DESIGN DIRECTION:

Create a premium modern e-commerce aesthetic.

Use:

- Clean professional typography
- Strong visual hierarchy
- Generous whitespace
- Modern product cards
- Professional product imagery/placeholders
- Subtle animations and hover effects
- Consistent spacing
- Modern buttons
- Trust-building sections
- Mobile-first responsive design

Do not make the interface cluttered or excessively futuristic.

CREATE THESE SECTIONS/PAGES:

1. HEADER

Include:

NovaCart logo/name

Home

Shop

Categories

About

Contact

Search

Wishlist icon

Cart icon with item count

Account/Login

Create responsive mobile navigation.

2. HOMEPAGE HERO

Headline:

"Discover More. Shop Smarter."

Supporting text:

"Fashion, technology and lifestyle essentials curated for your everyday life."

Primary CTA:

"Shop Now"

Secondary CTA:

"Explore Categories"

Include a premium lifestyle visual.

3. PRODUCT CATEGORIES

Create four category cards:

Fashion

Electronics

Accessories

Lifestyle

Each should have:

Image

Category name

Explore CTA

4. FEATURED PRODUCTS

Create at least 8 realistic sample products.

Each product card should contain:

Product image

Product name

Category

Current price

Optional original price

Rating

Wishlist button

Add to Cart button

5. PRODUCT DETAIL EXPERIENCE

Include:

Large product image

Product gallery concept

Product title

Price

Rating

Description

Key features

Quantity selector

Add to Cart

Buy Now

Wishlist

Delivery/trust information

6. SEARCH

Allow users to search products by:

Product name

Category

Keyword

Include a useful “No products found” state.

7. FILTERS AND SORTING

Include:

Category filter

Price filter

Product attribute filter

Sorting:

Price Low to High

Price High to Low

Popular

Newest

8. SHOPPING CART

Support:

Add product

Remove product

Update quantity

Subtotal

Cart count

Include an empty-cart state.

9. WISHLIST

Allow users to:

Save products

Remove saved products

Include an empty-wishlist state.

10. MOCK CHECKOUT

Create a realistic demo checkout UI with:

Contact information

Shipping address

Order summary

Shipping option

Mock payment-selection UI

Place Order button

IMPORTANT:

This is a demonstration checkout only.

Do not request, store or process real payment-card information.

Do not use real payment credentials or API secrets.

Clearly label payment functionality as demo/sandbox.

11. TRUST SECTION

Include:

Secure Shopping

Easy Returns

Customer Support

Quality Products

12. TESTIMONIALS

Create 3 clearly fictional/sample customer testimonials for demonstration purposes.

13. NEWSLETTER

Headline:

“Stay in the Loop”

Include:

Email field

Subscribe CTA

14. FAQ

Include 5 common shopping questions about:

Shipping

Returns

Orders

Payments
Support

15. FOOTER

Include:

Shop links
Company links
Customer support
Policies
Social placeholders
Newsletter
Copyright

RESPONSIVE REQUIREMENTS:

Optimize for:

320px mobile
375px mobile
Tablet
Laptop
Desktop

Ensure:

No horizontal overflow
Readable typography
Touch-friendly buttons
Responsive product grids
Mobile-friendly navigation
Usable cart and checkout

ACCESSIBILITY:

Use semantic structure.
Use descriptive labels.
Maintain readable contrast.
Support keyboard navigation where applicable.
Use meaningful image alt-text placeholders.

SEO:

Use logical heading hierarchy.
Create appropriate page titles and meta-description suggestions.
Use SEO-friendly semantic page structure.

STATES:

Include:

Loading state
Empty cart
Empty wishlist
No search results
Generic error state

SAMPLE DATA:

Use realistic but fictional sample product information.

Do not invent certifications or unsupported technical specifications.

FINAL QUALITY CHECK:

Before considering the website complete, verify:

Navigation

Responsiveness

Search

Filters

Cart

Wishlist

Checkout flow

Accessibility basics

Content consistency

Mobile layout

Build the website as a polished portfolio-quality prototype.

DEMO 4 — AI WEBSITE AUDIT

Platform: Claude

PROMPT 4 — UI/UX Audit Prompt

Act as a Senior UI/UX Auditor.

Review the attached/described website for [BRAND NAME] and score each of the following out of 10:

- Visual hierarchy
- Typography
- Spacing and whitespace
- Navigation clarity
- Product discovery
- Trust signals
- CTA strength and clarity
- Accessibility
- Mobile experience
- Overall conversion potential

For each category, briefly explain the score.

Then rank all identified issues into three tiers: Critical, Important, and Optional.

Do not redesign anything yet -- output the audit and prioritized list only.

Example –

Act as a Senior UI/UX Designer, E-commerce Conversion Specialist and Website Auditor.

I have generated Version 1 of my NovaCart e-commerce website.

Audit it as if it were preparing for a professional public launch.

Evaluate:

1. First impression
2. Visual hierarchy
3. Navigation
4. Hero section
5. Product discovery
6. Product cards
7. Typography
8. Spacing
9. Calls to action
10. Trust signals
11. E-commerce usability
12. Mobile experience
13. Accessibility
14. Conversion potential

Score each category from 1–10.

For every issue provide:

PROBLEM:

Why it matters:

RECOMMENDED IMPROVEMENT:

What should change:

PRIORITY:

Critical / Important / Optional

Then give me:

TOP 5 CHANGES THAT WOULD CREATE THE BIGGEST IMPROVEMENT.

Do not redesign the website yet.

Audit first.

DEMO 5 — VERSION 1 → PREMIUM VERSION 2

Platform: Lovable

PROMPT 5 — Premium UI Improvement Prompt

Act as a Senior UI/UX Designer.

Using the audit results above, improve the [BRAND NAME] website with these constraints:

- Premium look, but not overdesigned or cluttered
- Professional, consistent spacing throughout
- Clear product hierarchy (what matters most is visually dominant)
- Improved product cards (image, name, price, CTA clearly separated)
- Visible trust signals (reviews, guarantees, secure-checkout indicators)
- Strong, consistent call-to-action buttons
- One consistent design system (colors, fonts, spacing) across all pages
- Mobile-first layout adjustments

Address the Critical issues first, then Important, and only then Optional -- and briefly explain what you changed and why for each.

Example –

Improve the existing NovaCart website.

Do NOT rebuild it unnecessarily from scratch.

First preserve all working functionality.

Now improve the UI/UX using these priorities:

1. Strengthen visual hierarchy.

2. Make the hero section feel more premium with:

- Stronger headline hierarchy
- Better whitespace
- Clear Shop Now CTA
- Clear Explore Categories CTA

3. Improve product cards:

- Consistent image ratio
- Clear product name
- Strong price hierarchy
- Rating visibility
- Better Add to Cart button
- Wishlist interaction
- Consistent spacing

4. Improve navigation:

- Make Shop and Categories easy to discover
- Keep Search, Wishlist and Cart visible
- Improve mobile navigation

5. Add stronger trust signals:

- Secure shopping
- Easy returns
- Customer support
- Delivery information

6. Improve typography and spacing throughout.

7. Ensure one consistent design system:

- Typography
- Buttons
- Border radius
- Spacing
- Cards
- Icons

8. Improve responsive behavior on:

320px

375px

768px

1024px

Desktop

9. Keep the design premium but minimal.

Avoid:

- Excessive gradients
- Too many animations
- Clutter
- Tiny text
- Unnecessary decorative elements

After making the improvements, summarize:

BEFORE → PROBLEM

AFTER → IMPROVEMENT

WHY → UX/BUSINESS BENEFIT

DEMO 06 / MISSALPHA_AILAB

DEMO 6 — ADD E-COMMERCE FUNCTIONALITY

Platform: Lovable / Bolt

PROMPT 6 — Responsive Design Audit Prompt

Act as a Front-End QA Engineer specializing in responsive design.

Test the [BRAND NAME] website at these widths: 320px, 375px, 768px, 1024px, and standard desktop.

At each width, check:

- Navigation (does it collapse appropriately?)
- Product grid (does column count adjust sensibly?)
- Images (do they scale without distortion or overflow?)
- Typography (is it readable without zooming?)
- Buttons (are they touch-friendly, minimum ~44px tap target?)
- Cart and checkout flow (do all elements remain usable?)
- Forms (do input fields and labels remain aligned and usable?)

Report any breakage, overlap, or unreadable content per width, and suggest the specific CSS-level fix for each issue found.

Example –

Upgrade the existing NovaCart prototype with a more complete interactive e-commerce shopping experience.

Implement or improve:

1. PRODUCT SEARCH

Search products by:

- Name
- Category
- Keyword

2. FILTERING

Allow filtering by:

- Category
- Price range
- Relevant product attribute

3. SORTING

Include:

- Price: Low to High
- Price: High to Low
- Popular
- Newest

4. SHOPPING CART

Users should be able to:

- Add products
- Remove products
- Increase/decrease quantity
- View subtotal
- See cart item count

5. WISHLIST

Allow:

- Add to wishlist
- Remove from wishlist

6. EMPTY STATES

Create professional states for:

- Empty cart
- Empty wishlist
- No search results

7. MOCK CHECKOUT

Create:

- Contact information
- Shipping address
- Order summary
- Shipping selection
- Demo payment-selection interface
- Place Order button
- Demo confirmation state

IMPORTANT:

This must remain a demonstration checkout.

Do not collect or process real card information.

Do not use real API keys, payment credentials or production secrets.

8. USER FEEDBACK

When a user adds an item to cart or wishlist, provide clear visual feedback.

9. ERROR HANDLING

Create user-friendly messages when an action fails.

10. RESPONSIVENESS

Verify all new functionality works cleanly on mobile, tablet and desktop.

Do not break existing working features.

After implementation, list:

- Features added
- Edge cases handled
- Anything still requiring a real backend for production

DEMO 07 / MISSALPHA_AILAB

DEMO 7 — AI PRODUCT CONTENT IN SECONDS

Platform: Claude

PROMPT 7 — E-commerce Product Content Generator

Act as a Senior E-commerce Copywriter.

Write complete product content for [BRAND NAME], a [PRODUCT CATEGORY] brand targeting [TARGET AUDIENCE].

For each of [NUMBER] sample products, generate:

- Product title
- Short description (1 sentence, for product cards)
- Long description (2-3 sentences, for the product detail page)
- 3 key features
- 3 matching benefits (translate each feature into a customer benefit)
- Basic specifications table (if applicable)
- SEO title (under 60 characters)
- Meta description (under 160 characters)
- Image alt text
- 2 relevant FAQ entries
- 1 CTA line

IMPORTANT: Do not invent factual product specifications (like exact measurements, certifications, or technical ratings) unless I supply them -- use realistic placeholders instead and flag them clearly as placeholders.

Also generate: a brand tagline, a homepage hero headline, and one newsletter-signup CTA line, all in a consistent brand voice for [BRAND NAME].

Example –

Act as a Senior E-commerce Copywriter and Brand Strategist.

Create content for NovaCart.

Brand:

NovaCart

Audience:

Young Indian online shoppers aged approximately 18–35.

Brand personality:

Modern

Useful

Trustworthy

Youthful

Clear

Create:

1. One brand tagline
2. Three homepage hero headline options
3. One supporting hero paragraph

4. CTA options:

- Shop Now
- Category CTA
- Product CTA

- Newsletter CTA

5. Create 4 fictional sample products, one for each category:

Fashion

Electronics

Accessories

Lifestyle

For each provide:

- Product name
- One-line card description
- Product-page description
- 3 features
- 3 customer benefits
- CTA
- SEO title
- Meta description
- Image alt-text suggestion

IMPORTANT:

Do not invent factual technical specifications, certifications, warranties or performance claims.

If exact product specifications are unavailable, clearly mark them as placeholders.

Make the copy concise and suitable for a modern e-commerce website.

DEMO 8 — RESPONSIVE DESIGN CHALLENGE

Platform: Lovable or your builder's preview

First resize manually: Desktop → Tablet → Mobile.

PROMPT 8 — Search + Filter + Cart + Wishlist Feature Prompt

Act as a Senior Product Manager and Front-End Developer.

Define and implement the following e-commerce features for [BRAND NAME]:

- Search (with basic keyword matching across product name/category)
- Filters (by category, price range, and at least one product-specific attribute)
- Sort (by price, popularity, newest)
- Cart (add, remove, update quantity, view subtotal)
- Wishlist concept (add/remove a product to a saved list)
- Empty states (empty cart, empty wishlist, no search results)
- Loading states (while data is fetching)
- Error states (failed add-to-cart, failed checkout)
- Mock checkout flow (clearly labeled as a demo/sandbox checkout -- no real payment processing)

For each feature, provide:

- A short user story ("As a shopper, I want to... so that...")
- Acceptance criteria (clear pass/fail conditions)
- Edge cases to consider (e.g., adding an out-of-stock item, filtering with zero results)

Example –

Act as a Senior Front-End Developer and Responsive Design QA Engineer.

Audit the entire NovaCart website at:

- 320px
- 375px
- 768px
- 1024px
- Standard desktop

Check:

1. Navigation
2. Hero layout
3. Product grids
4. Product cards
5. Images
6. Typography
7. Buttons and tap targets
8. Search and filters
9. Cart
10. Wishlist
11. Checkout
12. Forms
13. Footer
14. Horizontal overflow

For every problem:

WIDTH:

COMPONENT:

PROBLEM:

WHY IT HAPPENS:

RECOMMENDED FIX:

Then implement safe responsive fixes without breaking the desktop experience.

Prioritize:

Critical mobile breakage

→ Usability

→ Readability

→ Visual polish

After fixing, summarize the changes.

DEMO 9 — SEO A PRODUCT PAGE

Platform: Claude

PROMPT 9 — SEO Optimization Prompt

Act as an SEO Specialist for E-commerce websites.

For the [PAGE NAME] page of [BRAND NAME] (a [PRODUCT CATEGORY] brand targeting [TARGET AUDIENCE]), generate:

- Likely search intent for this page
- 5-8 relevant keywords/topics
- SEO title tag (under 60 characters)
- Meta description (under 160 characters)
- H1 and a logical H2 structure
- Optimized product/category copy suggestions
- Alt text suggestions for key images
- 3-5 FAQ topics matching real search intent
- Internal linking suggestions (which other pages this page should link to)
- Structured data / schema markup recommendations (e.g., Product, BreadcrumbList)
- A basic technical SEO checklist for this page

Important: do not guarantee search rankings or traffic numbers -- present this as a best-practice draft for human review.

Example-

Act as an E-commerce SEO Specialist.

Optimize one NovaCart product page for organic search while keeping the content useful for real customers.

Product:

[INSERT ONE NOVACART PRODUCT]

Target Audience:

Young Indian online shoppers.

Generate:

1. Primary search intent
2. Relevant keyword/topic ideas
3. SEO title under approximately 60 characters
4. Meta description under approximately 160 characters
5. H1
6. Recommended H2 structure
7. Product-description improvement
8. Image alt-text suggestions
9. 5 relevant FAQ questions
10. Internal linking suggestions
11. Structured-data/schema recommendations
12. Technical SEO checklist

Separate your recommendations into:

CONTENT SEO

TECHNICAL SEO

USER EXPERIENCE

IMPORTANT:

Do not guarantee Google rankings.

Do not keyword-stuff.

Optimize for humans first and search engines second.

DEMO 10 — AI DEBUG DETECTIVE

Platform: Claude / Cursor / Replit

Prepare a bug such as cart count not updating.

PROMPT 10 — AI Debugging Prompt

Act as a Senior Software Engineer performing a code review and debug session.

Here is the issue: [DESCRIBE THE BUG, e.g., "the Add to Cart button does not update the cart count"].

Here is the relevant code/context: [PASTE CODE OR DESCRIBE COMPONENT]

Please:

1. Explain what is likely happening in plain language.
2. Identify the most probable root causes and rank them by likelihood, citing evidence from the code/context.
3. Propose the smallest, safest fix -- avoid unnecessary rewrites.
4. Provide the exact code change.
5. Provide 2-3 test cases to verify the fix works.
6. Flag any regression risk introduced by this fix.
7. Flag any security implications of this fix, if relevant.

Example –

Act as a Senior Software Engineer debugging an e-commerce application.

BUG:

When a user clicks “Add to Cart”, the product appears to be added, but the cart count displayed in the header does not update correctly.

I will provide the relevant code/context below:

[PASTE CODE OR COMPONENT HERE]

Do NOT immediately rewrite the entire component.

Follow this debugging process:

STEP 1 — UNDERSTAND

Explain the expected behavior.

STEP 2 — DIAGNOSE

Identify the 3 most likely root causes and rank them by probability.

STEP 3 — EVIDENCE

Explain what evidence in the code supports each hypothesis.

STEP 4 — FIX

Recommend the smallest safe fix.

STEP 5 — CODE

Show only the necessary code changes.

STEP 6 — TEST

Provide test cases for:

- Add first product
- Add multiple products
- Increase quantity
- Remove product
- Refresh/state persistence if applicable

STEP 7 — REGRESSION

Identify what else could break because of this change.

STEP 8 — VERIFY

Give me a final checklist to confirm the bug is actually fixed.

Explain everything in simple language so a beginner can understand WHY the bug occurred.

DEMO 11 — PRE-LAUNCH QA

Platform: Claude

PROMPT 11 — QA + Pre-Launch Audit Prompt

Act as a QA Engineer preparing [BRAND NAME] for launch.

Generate a structured QA test table with these columns: Test ID, Scenario, Steps, Expected Result, Priority (Critical/High/Medium/Low), Status (Pass/Fail/Fix Needed).

Cover these categories:

- Functional (navigation, forms, buttons, search, filters)
- Responsive (mobile, tablet, desktop)
- Accessibility (contrast, keyboard navigation, alt text)
- Performance (image sizes, load speed)
- Security basics (HTTPS, input validation, no exposed secrets)
- SEO (metadata present, no broken links)
- E-commerce flows (add to cart, update quantity, mock checkout, empty states)

Produce at least 15 test rows across these categories.

Example –

Act as a Senior QA Engineer preparing NovaCart for launch.

Create a professional pre-launch test plan.

Audit these categories:

FUNCTIONALITY

- Navigation
- Search
- Filters
- Product details
- Cart
- Wishlist
- Forms
- Mock checkout

RESPONSIVE DESIGN

- Mobile
- Tablet
- Desktop

ACCESSIBILITY

- Keyboard navigation
- Labels
- Alt text
- Contrast
- Focus states

PERFORMANCE

- Images
- Loading
- Unnecessary assets

SECURITY BASICS

- HTTPS
- Input validation

- No exposed API keys/secrets
- Safe handling of forms

SEO

- Titles
- Meta descriptions
- Heading hierarchy
- Broken links
- Sitemap/robots considerations

Create a table:

TEST

WHAT TO CHECK

EXPECTED RESULT

PRIORITY

STATUS

Use:

PASS

FAIL

FIX NEEDED

Then identify:

TOP 5 ITEMS THAT MUST BE FIXED BEFORE LAUNCH.

DEMO 12 — DEPLOYMENT

Platform: Vercel / Netlify

Code/Project → Repository → Hosting → Domain → HTTPS → Live

PROMPT 12 — Deployment Readiness Prompt

Act as a DevOps-minded Web Developer preparing [BRAND NAME] for deployment.

Generate a pre-deployment checklist covering:

- Pre-deployment code review items
- Environment variables needed (list by name only, no real values)
- Build steps
- Hosting platform considerations (e.g., Vercel, Netlify, GitHub Pages)
- Domain setup and HTTPS/SSL steps
- Analytics setup (e.g., Google Analytics, Search Console)
- SEO readiness (sitemap.xml, robots.txt)
- Backup plan before going live
- A post-launch smoke test checklist (critical flows to manually re-check right after deployment)
- Rollback considerations if something breaks after launch

IMPORTANT: Never include real API keys, real credentials, or real payment processor secrets in this output -- reference them only by placeholder name.

PROMPT 13 — Client Requirement -> Proposal Prompt

Act as a Freelance Web Consultant turning a client's message into a professional proposal outline.

Client message: "[PASTE CLIENT'S RAW MESSAGE HERE]"

Convert this into a structured discovery and proposal outline:

1. Discovery questions I should ask before quoting
2. Inferred business goals
3. Likely target audience
4. Recommended pages
5. Recommended features
6. Deliverables list
7. Timeline assumptions (in relative terms, e.g., "Week 1-2", not fixed dates)
8. Explicit exclusions (what is NOT included)
9. Ongoing maintenance considerations
10. A basic/standard/premium scope comparison (feature differences only)

IMPORTANT: Do not invent or suggest specific pricing figures -- leave pricing as a placeholder for me to fill in.

PROMPT 14 — Multi-Role Expert Review Prompt

Act as a panel of seven experts reviewing [BRAND NAME]'s website: a Product Manager, a UX Designer, a Developer, a QA Engineer, an SEO Specialist, a Security Reviewer, and a Growth Strategist.

For each role, provide exactly the top 3 issues or recommendations that role would raise, written in 1-2 sentences each.

Then combine all recommendations into one prioritized list, sorted into: Critical, Important, and Optional.

PROMPT 15 — 30-Day Growth Strategy Prompt

Act as a Growth Strategist for E-commerce websites.

Create a 30-day growth plan for [BRAND NAME] after launch, structured as:

Week 1 -- Measurement Foundation: analytics setup, key events to track, baseline metrics

Week 2 -- SEO & Content: content calendar, on-page fixes, keyword targets

Week 3 -- Conversion: CRO experiments, checkout friction reduction, trust-signal additions

Week 4 -- Retention & Experiments: email capture, abandoned-cart concept, retention experiments

For each week, include:

- 2-3 specific KPIs to track
- 1-2 experiments to run
- Key analytics events to set up
- Content or email actions
- One product-page optimization idea

IMPORTANT: Do not promise specific revenue outcomes, traffic numbers, or guaranteed results -- frame everything as a testable plan.
